## Notes:

1. A person-year of coverage is coverage for one person for the entire year. For example, two persons with six months of coverage each are counted as one person-year of coverage. A family is defined as a non-dependent taxpayer or married couple filing jointly plus all dependents. "Unmarried" families include taxpayers filing as single or head of household. Married families include taxpayers filing jointly or separately and qualifying widows and widowers. Families with children include those with dependents identified as children living at home. A child may include persons under age 19 , students age 19 through 22, and disabled children of the taxpayer of any age. Non-filing families are not shown by family status but are included in the totals for all families and all families with children.
2. Equals modified adjusted gross income (MAGI) for 2018 divided by the Federal poverty level for 2017 (which is used for premium tax credit and related calculations for tax year 2018). For this purpose, MAGI is adjusted gross income plus tax-exempt interest, any foreign earned income or housing exclusion, and non-taxable Social Security benefits.
3. Employer-sponsored coverage includes a total of 1.5 million people families with both employer-sponsored coverage and the self-employed health insurance deduction.
4. Includes persons in families claiming the deduction for self-employed health insurance coverage. Excludes a total of 1.5 million person in families with both employer-sponsored coverage and the selfemployed health insurance deduction; these appear in the employer-sponsored group.

All counts have been rounded to the nearest thousand; sum might not add to total due to rounding.

Notes:

1. A person-year of coverage is coverage for one person for the entire year. For example, two persons with six months of coverage each are counted as one person-year of coverage. All counts have been rounded to the nearest thousand; sum might not add to total due to rounding.
2. Equals modified adjusted gross income (MAGI) for 2018 divided by the Federal poverty level for 2017 (which is used for premium tax credit and related calculations for tax year 2018). For this purpose, MAGI is adjusted gross income plus tax-exempt interest, any foreign earned income or housing exclusion, and non-taxable Social Security benefits.
3. Employer-sponsored coverage includes a total of 1.5 million people families with both employer-sponsored coverage and the self-employed health insurance deduction.
4. Includes persons in families claiming the deduction for self-employed health insurance coverage. Excludes a total of 1.5 million person in families with both employer-sponsored coverage and the self employed health insurance deduction; these appear in the employer-sponsored group.
5. Detail not shown due to small sample size.

#### Abstract

Notes: 1. Employer-sponsored coverage includes a total of 1.5 million people in families with both employer-sponsored coverage and the self-employed health insurance deduction. A family is defined as a non-dependent taxpayer or married couple filing jointly plus all dependents. "Unmarried" families include taxpayers filing as single or head of household. Married families include taxpayers filing jointly or separately and qualifying widows and widowers. Families with children include those with dependents identified as children living at home. A child may include persons under age 19, students age 19 through 22 , and disabled children of the taxpayer of any age. Non-filing families are not shown by family status but are included in the totals for all families and families with children. 2. Equals modified adjusted gross income (MAGI) for 2018 divided by the Federal poverty level for 2017 (which is used for premium tax credit and related calculations for tax year 2018). For this purpose, MAGI is adjusted gross income plus tax-exempt interest, any foreign earned income or housing exclusion, and non-taxable Social Security benefits. 3. The tax value of the exclusion includes the tax reduction from the exclusion of premiums of major medical plans and supplemental plans (such as those for dental, vision and drug coverage) and from the exclusion of contributions to flexible spending accounts. 4. A person-year of coverage is coverage for one person for the entire year. For example, two persons with six months of coverage each are counted as one person-year. 5. Premiums include those for major medical plans only. Employer and employee contributions are included.

All counts and amounts have been rounded to the nearest thousand; sum might not add to total due to rounding.

Notes:

1. A person-year of coverage is coverage for one person for the entire year. For example, two persons with six months of coverage each are counted as one person-year of coverage. A family is defined as a non-dependent taxpayer or married couple filing jointly plus all dependents. "Unmarried" families include taxpayers filing as single or head of household. Married families include taxpayers filing jointly or separately and qualifying widows and widowers. Families with children include those with
dependents identified as children living at home. A child may include persons under age 19 , students age 19 through 22 , and disabled children of the taxpayer of any age. Non-filing families are not shown by family status but are included in the total for all families and families with children.
2. Equals modified adjusted gross income (MAGI) for 2018 divided by the Federal poverty level for 2017 (which is used for premium tax credit and related calculations for tax year 2018). For this purpose, MAGI is adjusted gross income plus tax-exempt interest, any foreign earned income or housing exclusion, and non-taxable Social Security benefits.
3. Advance Premium Tax credit (APTC) is the amount of credit paid to the insurer in advance, on behalf of the taxpayer based on expected income and family circumstances at the time of enrollment
4. Total premium tax credit (PTC) is the amount of credit claimed on the tax return, based on actual income and family circumstances for the tax year.
5. Excess APTC repaid is the amount of APTC paid on behalf of the taxpayer in excess of PTC claimed on the return, up to the maximum amount that must be repaid.
6. Net premium tax credit is the amount of credit claimed on the tax return in excess of APTC paid during the year.
7. Total APTC and PTC subsidy is equal to the APTC minus excess APTC repaid plus net PTC claimed on the tax return. This is also equal to total PTC as calculated on the tax return plus any excess APTC that is not repaid because it is below the statutory limitation on amounts that must be repaid.

All counts and amounts have been rounded to the nearest thousand; sum might not add to total due to rounding.

Notes:

1. A person-year of coverage is coverage for one person for the entire year. For example, two persons with six months of coverage each are counted as one person-year of coverage. A family is defined as a non-dependent taxpayer or married couple filing jointly plus all dependents.
2. Equals modified adjusted gross income (MAGI) for 2018 divided by the Federal poverty level for 2017 (which is used for premium tax credit and related calculations for tax year 2018). For this purpose, MAGI is adjusted gross income plus tax-exempt interest, any foreign earned income or housing exclusion, and non-taxable Social Security benefits.
3. Advance Premium Tax credit (APTC) is the amount of credit paid to the insurer in advance, on behalf of the taxpayer based on expected income and family circumstances at the time of enrollment.
4. Total premium tax credit (PTC) is the amount of credit claimed on the tax return, based on actual income and family circumstances for the tax year.
5. Excess APTC repaid is the amount of APTC paid on behalf of the taxpayer in excess of PTC claimed on the return, up to the maximum amount that must be repaid.
6. Net premium tax credit is the amount of credit claimed on the tax return in excess of APTC paid during the year.
7. Total APTC and PTC subsidy is equal to the APTC minus excess APTC repaid plus net PTC claimed on the tax return. This is also equal to total PTC as calculated on the tax return plus any excess APTC that is not repaid because it is below the statutory limitation on amounts that must be repaid.

All counts have been rounded to the nearest thousand; sum might not add to total due to rounding.
