Introduction

This report presents data and analysis of foreign portfolio investment in U.S. securities, that is, U.S. portfolio security liabilities to foreign residents as of end-June 2022. The data come primarily from the Treasury International Capital (TIC) survey of foreign holdings of U.S. securities, also known as the TIC liabilities survey, a joint undertaking of the U.S.

Department of the Treasury, the Federal Reserve Bank of New York, and the Board of Governors of the Federal Reserve System.¹ The TIC liabilities survey collects data at the individual security level, allowing for analysis along a variety of dimensions, including country of foreign holder, currency, security type, remaining maturity, type of foreign holder (private or official), and industry of issuer. In addition, the security-level detail allows for extensive data review and for correction of errors that might otherwise go undetected.

Chapter 1 presents the findings of the 2022 TIC liabilities survey. Chapter 2 discusses details of the survey collection methodology and the procedures used for data review and analysis. Chapter 3 provides background information on the TIC surveys and the TIC reporting system.

The report includes three appendixes. Appendix A presents a variety of statistics not included elsewhere in the report. Appendix B contains the underlying data tables for all exhibits shown in graphical form. Appendix C contains a copy of the reporting forms and instructions used to collect the survey data presented in this report.

Technical Notes

Valuation: All holdings are measured at market value as of the survey dates. Except for zero-coupon debt securities, all market values reflect “clean” prices, that is, excluding accrued interest.²

Foreign Country Based on Residence: In this report, holdings are reported by U.S. issuers and custodians based on the legal residence of the foreign holder. Thus, as discussed in more detail in the section on custodial bias in Chapter 3, if a foreign custodian holds securities on behalf of a third country, the TIC system records the holder country as the custodian’s residence, not the country of residence of the custodian’s customer. In addition,

¹ In this report, foreign portfolio investment in U.S. securities includes all U.S. securities owned by foreign residents except where the owner has a direct investment relationship with the U.S. securities’ issuer. “Direct investment” means the ownership or control, directly or indirectly, by one person or by a group of affiliated persons, of 10 percent or more of the voting stock of a business enterprise. See “direct investment” in the [TIC Glossary](#).

² While the International Monetary Fund’s (IMF’s) Balance of Payments Manual 6 (BPM6) indicates that “dirty” prices (which include accrued interest) are preferred, the TIC system uses clean prices because they are more readily available to respondents and data compilers.

funds with legal residence outside the United States (for example, in the Cayman Islands) can and do hold securities on behalf of residents of other countries, including the United States.

Securities Categories: Equities include common and preferred stock; all types of investment company shares, such as open-end funds, closed-end funds, money market mutual funds, and hedge funds; interests in limited partnerships and other equity interests that may not involve stocks or shares. Agencies include U.S. government agencies and corporations as well as federally sponsored enterprises, such as the Federal National Mortgage Association (Fannie Mae). Corporate debt includes securities issued by U.S. corporations as well as small amounts of negotiable certificates of deposit with maturity over one year, debt issued by state and local governments, and debt issued by nonprofit organizations.

Industry classification: The primary business activity of an issuer is used to assign a [North American Industry Classification System \(NAICS\) 2022](#) industry code.

Rounding: In all tables, components may not sum to totals because of rounding. Values that would round to zero but are nonzero in the data are indicated with an asterisk (*).

Revisions: Many exhibits also include data from previous surveys, but some figures may differ slightly from previous reports due to data revisions. This report contains no significant revisions to past survey data.

Dates: All TIC liabilities surveys since 2002 have been collected as of end-June, and therefore references to the year of observation for liabilities data indicate end-June of that year.

Geographical Notes

Mainland China excludes Hong Kong and Macau, which are reported separately.

The euro area includes Austria, Belgium, Cyprus, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, Netherlands, Portugal, Slovakia, Slovenia, Spain, Estonia from 2011, Latvia from 2014, and Lithuania from 2015.

We sometimes group countries by type of economy, as follows. These groups are mutually exclusive, and the global totals shown in the report are the sum of advanced foreign economies, emerging market economies, Caribbean financial centers, and international and regional organizations.

Caribbean financial centers are Bermuda; Bonaire, Sint Eustatius, and Saba; British Virgin Islands; Cayman Islands; Curaçao; and Panama.

Advanced foreign economies include the euro area; Australia; Canada; Czech Republic; Denmark; Hong Kong; Iceland; Israel; Japan; New Zealand; Norway; Singapore; South Korea; Sweden; Switzerland; Taiwan; and United Kingdom, including Jersey, Guernsey, and Isle of Man.

Emerging market economies are all remaining countries that are not in the advanced foreign economies or Caribbean financial centers groups.

Acknowledgments

The Department of the Treasury, the Federal Reserve Bank of New York, and the Board of Governors of the Federal Reserve System express their appreciation to all survey respondents whose efforts and information have made this report possible.

Chapter 1. Results of the End-June 2022 Survey

Foreign Holdings of U.S. Securities by Broad Security Type

The market value of foreign holdings of U.S. securities in June 2022 stepped down from the previous survey in June 2021, primarily due to decreased holdings of equities (Exhibits 1 and 2). Exhibit 1 shows the total market value of foreign holdings of U.S. securities, by type of security held, for recent years; Exhibit 2 shows these holdings by broad security type over a longer period, since 2008. The overall composition of foreign holdings typically changes only slowly over time. Long-term securities, including equities and long-term debt, make up the bulk of foreign holdings; short-term debt accounts for less than ten percent of overall debt holdings.³

Total	17,134	17,139	18,412	19,400	20,534	21,954	27,189	24,893

The year between the previous liabilities survey, conducted as of June 2021, and the current survey, as of June 2022, includes a period of considerable volatility in asset prices that affected the market value of U.S. securities held by foreign investors. Equity prices rose in the second half of 2021 but then fell sharply following the Russian invasion of Ukraine early in 2022; over the 12-month period the measured value of equities held by foreign investors fell on net. In addition, yields on long-term securities rose substantially over the first six months of 2022 as the Federal Reserve raised policy rates, resulting in valuation losses on long-term debt securities that offset increased holdings from foreign purchases of debt securities. These sizable market value changes can be seen in the monthly aggregate TIC data on securities holdings and transactions.⁴

³ Long-term securities are defined as those without a stated maturity date (such as equities) or with an original term-to-maturity greater than one year.

⁴ These data are collected on the TIC Form SLT and TIC Form S, respectively. See Chapter 3 for more information on the TIC reporting system.

Exhibit 2: Foreign Holdings of U.S. Securities by Broad Security Type

*Details included in the Technical Notes.

Accounting for Changes in Foreign Holdings of U.S. Long-Term Securities

Exhibit 3 decomposes the change in the value of foreign holdings of U.S. long-term securities between 2021 and 2022 (column 3) into four components. These four components are: net foreign purchases (purchases less sales) of U.S. long-term securities during the period as reported on the TIC Form S (column 4); adjustments for estimated stock swaps and estimated principal repayments for agency and corporate asset-backed securities (ABS) (column 5); estimated adjustments for price changes, or valuation adjustments (column 6); and remaining changes not accounted for by the other factors (column 7).⁵

⁵ Column (5): asset-backed securities (ABS) typically prepay principal to bondholders when the underlying loans are prepaid. For stock swaps, when a foreign company acquires a U.S. company and the deal is financed in part through an exchange of equity (a “stock swap”), U.S. residents who held stock in the target company become holders of foreign equity. Conversely, if a U.S. company acquires a foreign company, a stock swap can increase foreign holdings of U.S. equity.

Exhibit 3: Accounting for Changes in Foreign Holdings of U.S. Long-Term Securities

Trillions of dollars

Type of security	Of which:

1. In each row, columns are such that: (2)-(1)=(3)=(4)+(5)+(6)+(7).
2. As reported on TIC S.
3. Stock swaps for equities; ABS repayments for U.S. agency and corporate debt. Not applicable denoted by n.a.
4. Includes the value of costs associated with securities transactions and included in net purchases.

The \$2.34 trillion decrease in foreign holdings of long-term U.S. securities between 2021 and 2022 was mainly a result of significant valuation losses. As noted above, U.S. equity prices fell on net between 2021 and 2022, ultimately contributing to significant valuation losses for foreign holdings of U.S. equity securities, while longer term yields rose significantly, resulting in price declines and substantial valuation losses on debt securities.

These valuation losses were partially offset by large net transactions over the period. Foreign investors on net purchased \$0.47 trillion in long-term Treasuries, nearly offsetting the estimated \$0.59 trillion in valuation losses. Net purchases of agency bonds were also large, but after accounting for principal repayments (included in column 5), acquisitions of U.S. agency bonds were little changed relative to the prior survey.

Other changes, computed as residuals in column 7, can include many potential measurement errors. The residual can include net purchases not captured by the TIC Form S. Reported transactions, which are meant to only capture the cost of securities purchased or sold, may also erroneously include transaction costs. The residual can also include errors in estimates of valuation adjustments, which may be imprecise, or in estimates of ABS repayment flows. In addition, the survey values themselves may be imprecise due to missing reports or reporting errors. Finally, the residual may include cross-border short sales or covering of

short sales of securities between U.S. and foreign investors because of the challenges in correctly distinguishing actual purchases or sales of securities, which are reportable, from changes in holdings resulting from securities borrowing or lending activities, which are not reportable.⁶ These challenges are discussed further in Chapter 2.

Foreign Holdings of U.S. Securities Outstanding by Security Type

Foreigners own about 20 percent of all U.S. securities outstanding, about unchanged from the previous survey; this share has been largely stable since 2011 (Exhibit 4).⁷ As a fraction of foreigners' total holdings, the equity share has trended upwards while the shares of other securities have trended downward since 2008. Foreign-owned shares of securities outstanding are the highest for U.S. Treasuries at about 30 percent and almost as high for corporate debt (see the Technical Notes for the definition of corporate debt).⁸ Foreign shares of agency debt and equities are notably lower. The proportion of U.S. Treasuries owned by foreigners is higher than other types of securities largely because foreign official institutions (FOIs) hold a substantial quantity of U.S. Treasuries. This point is discussed in greater detail below and shown in Exhibits 9, 10, and 16.⁹

The foreign ownership shares of both marketable Treasuries and agency securities have trended down since 2008, as foreign net purchases of Treasuries and agencies have not kept pace with issuance. When measured in dollar terms, however, foreign investors' holdings of both U.S. Treasuries and agencies were roughly unchanged relative to 2021. In contrast, since 2008 the foreign ownership shares of corporate debt and equities have grown.

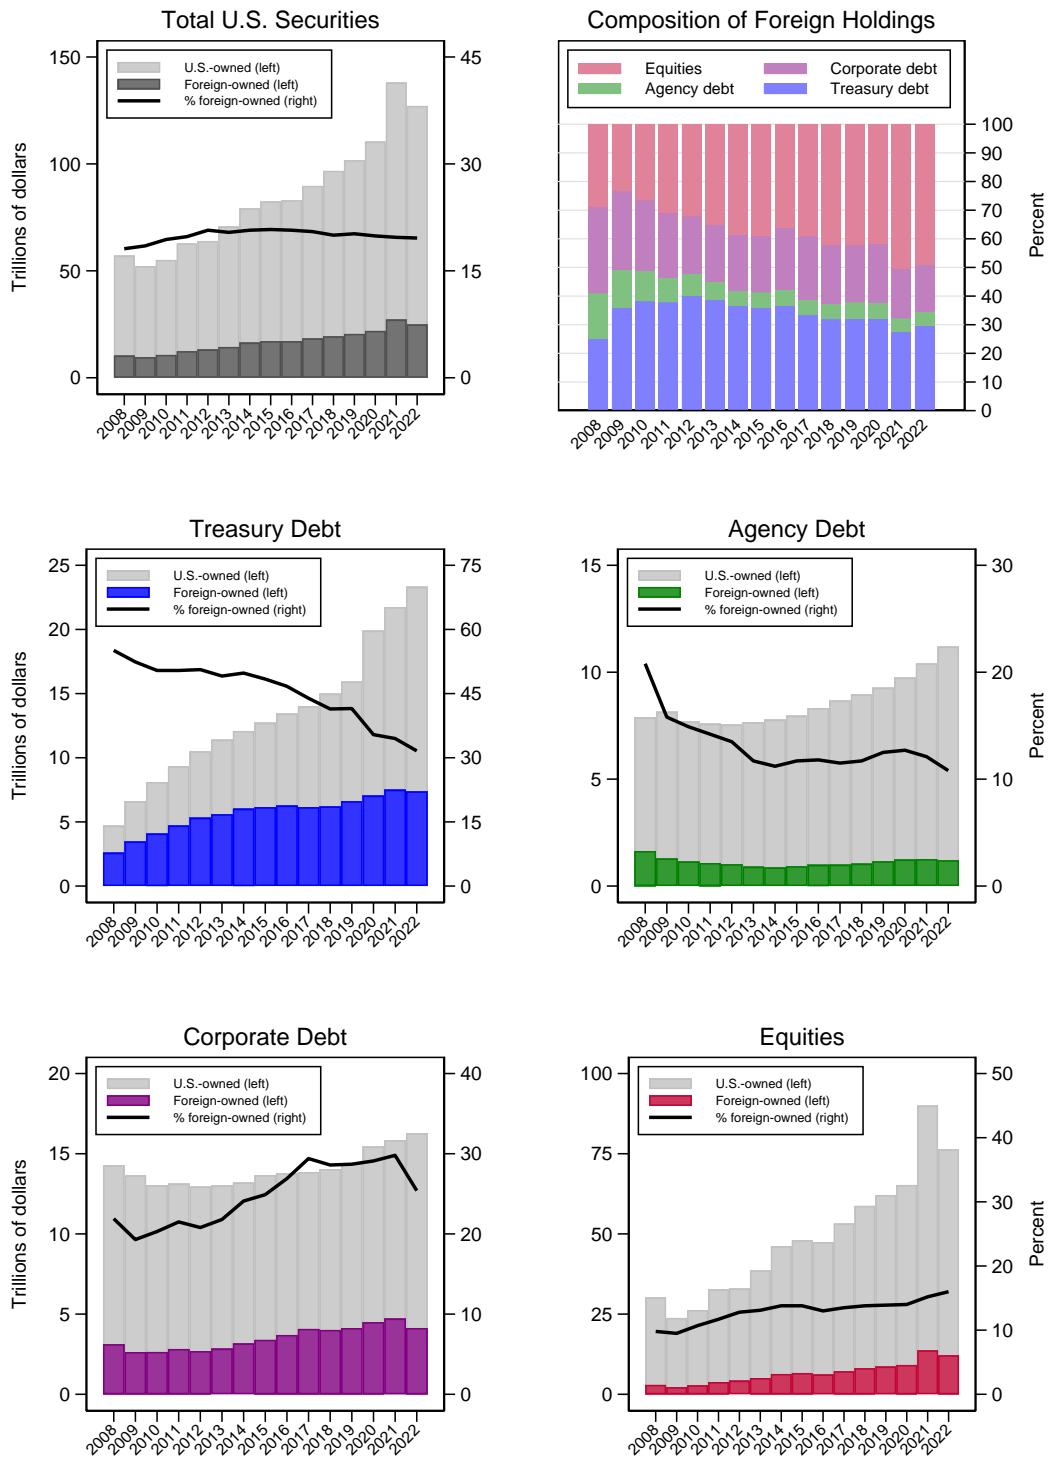

⁶ A short sale is the sale of a security that is not owned by the seller. Typically, the securities used in short sales are borrowed and are then sold by the borrower with the expectation that the securities' prices will decline, enabling the seller to repurchase them at a lower price and return them to the lender, thereby making a profit. Covering a short sale involves buying securities to repay a prior loan of securities.

⁷ Exhibit 4 shows foreign holdings of U.S. securities as an estimated share of the total stock outstanding of each security type as of the survey dates. These figures should be viewed as rough indications, because for some securities it is not possible to obtain data on the total value outstanding by security type on the same basis as the TIC Form SHL data. For example, while the charts show the face value outstanding of each type of U.S. debt security, foreign ownership of these U.S. debt securities is presented at market value, which can differ from face value. Moreover, it is difficult to know how much of some types of equity are outstanding, such as equity interests that may not involve stocks or shares. Thus, although the comparisons will be somewhat imprecise, they do indicate long-term trends.

⁸ Another way to construct the foreign-owned share of Treasuries is to use the face value in the numerator and denominator as in [Tabova, Alexandra M. and Warnock, Francis E. "Preferred Habitats and Timing in the World's Safe Asset," NBER Working Paper, December 2022, 1-57.](#)

⁹ FOIs in this report consist primarily of foreign national government institutions involved in the formulation of monetary policy, such as central banks, but also include national government-owned investment funds, including sovereign wealth funds, and other national government institutions. See [TIC Country Codes and Partial List of Foreign Official Institutions](#) for a partial list of FOIs.

Exhibit 4: Foreign Holdings of U.S. Securities by Type

Agencies: For total amounts outstanding, source is Federal Reserve Statistical Release Z.1, Table L.211, row 1. These amounts include all securities issued by federally-sponsored agencies and corporations, as well as all securities guaranteed by the Government National Mortgage Association (GNMA). Amounts outstanding include those held by the Federal Reserve System.

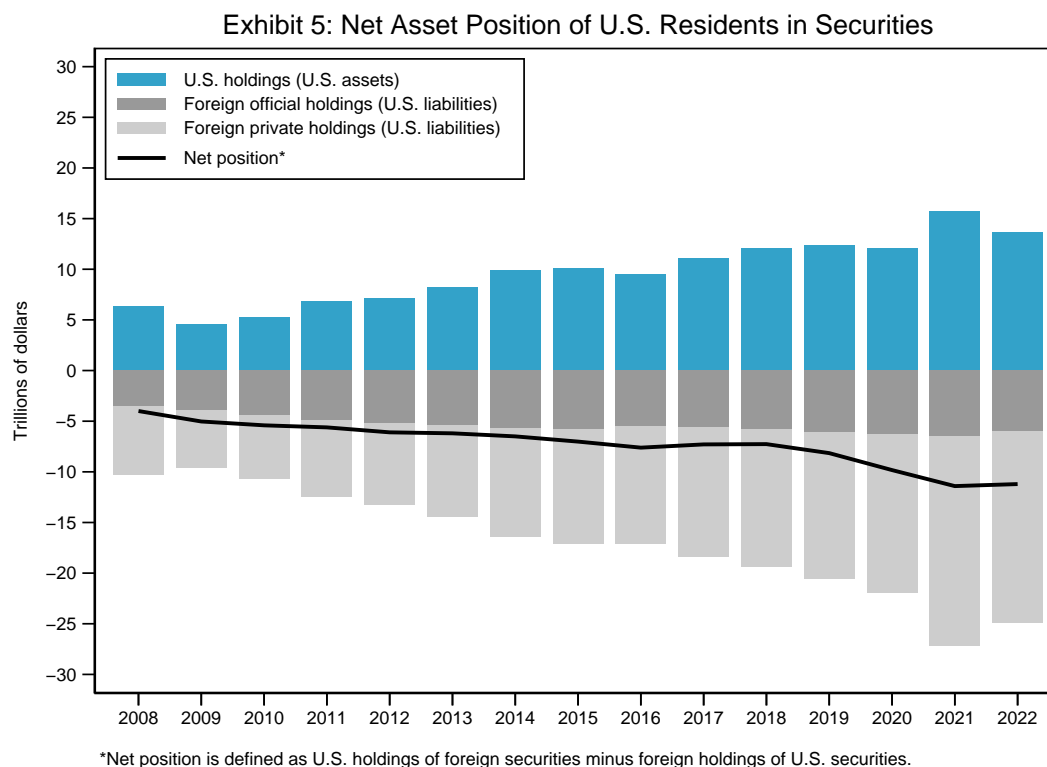

Corporate Debt: For total amounts outstanding, source is Federal Reserve Statistical Release Z.1, Table L.208 row 1 less rows 3, 4, and 24.

Equities: For total amounts outstanding, source is Federal Reserve Statistical Release Z.1, Table L.223 row 1, minus Table L.133 row 44, plus Table L.234 row 1, plus Table L.206 row 1.

Corporate bond issuance surged from 2020 through the first half of 2022 (gray bars in Exhibit 4), as corporations took advantage of low interest rates during the COVID-19 pandemic, but foreign investor purchases did not keep pace. The share of foreign holdings of equities has risen steadily since 2009, even as equities outstanding on net have grown. The trend in foreign shares of corporate securities is opposite that of Treasuries and agencies largely because of the role of foreign private investors, who hold considerably more corporate securities than foreign official investors. As shown in Exhibit 9, foreign official investors' share of total foreign holdings has declined since 2008 as the share held by private investors has increased.

U.S. Residents' Net Asset Position in Securities

The net asset position of U.S. residents, or U.S. holdings of foreign securities less foreign holdings of U.S. securities, has generally trended down as foreign holdings of U.S. assets have increased more than U.S. holdings of foreign assets (Exhibit 5). Relative to the previous survey, however, the net asset position of U.S. residents was about unchanged, as U.S. assets and liabilities decreased by similar amounts throughout 2022, mostly from valuation loss.

Because U.S. official holdings of foreign securities are only a small share of the total, U.S. official and private holdings are not shown separately in Exhibit 5.¹⁰ U.S. holdings of foreign securities are collected annually by the “Report of U.S. Ownership of Foreign Securities, Including Selected Money Market Instruments” (TIC SHC) survey. U.S. liabilities to foreign official investors showed a modest decline, mostly in Treasuries (see Exhibit 9). U.S. liabilities held by foreign private investors declined from 2021 to 2022 mainly due to valuation losses in U.S. equities.

Foreign Holdings of U.S. Securities by Region

A disaggregation of foreign holdings by both geographical regions (left panels of Exhibit 6) and type of economy (right panels of Exhibit 6) illustrates differences in the size and composition of holdings, patterns that have been broadly stable over time. By geographical region, Europe and Asia hold the most U.S. securities. Equities accounted for just over half of European holdings of U.S. securities and about one-third of Asian holdings of U.S. securities in 2022. Measured in dollar terms, Europe has held the highest level of U.S. equities since the 2012 survey, followed by the Americas.¹¹ By type of economy, advanced foreign economies (AFEs) continue to hold the highest levels of U.S. equities by far.

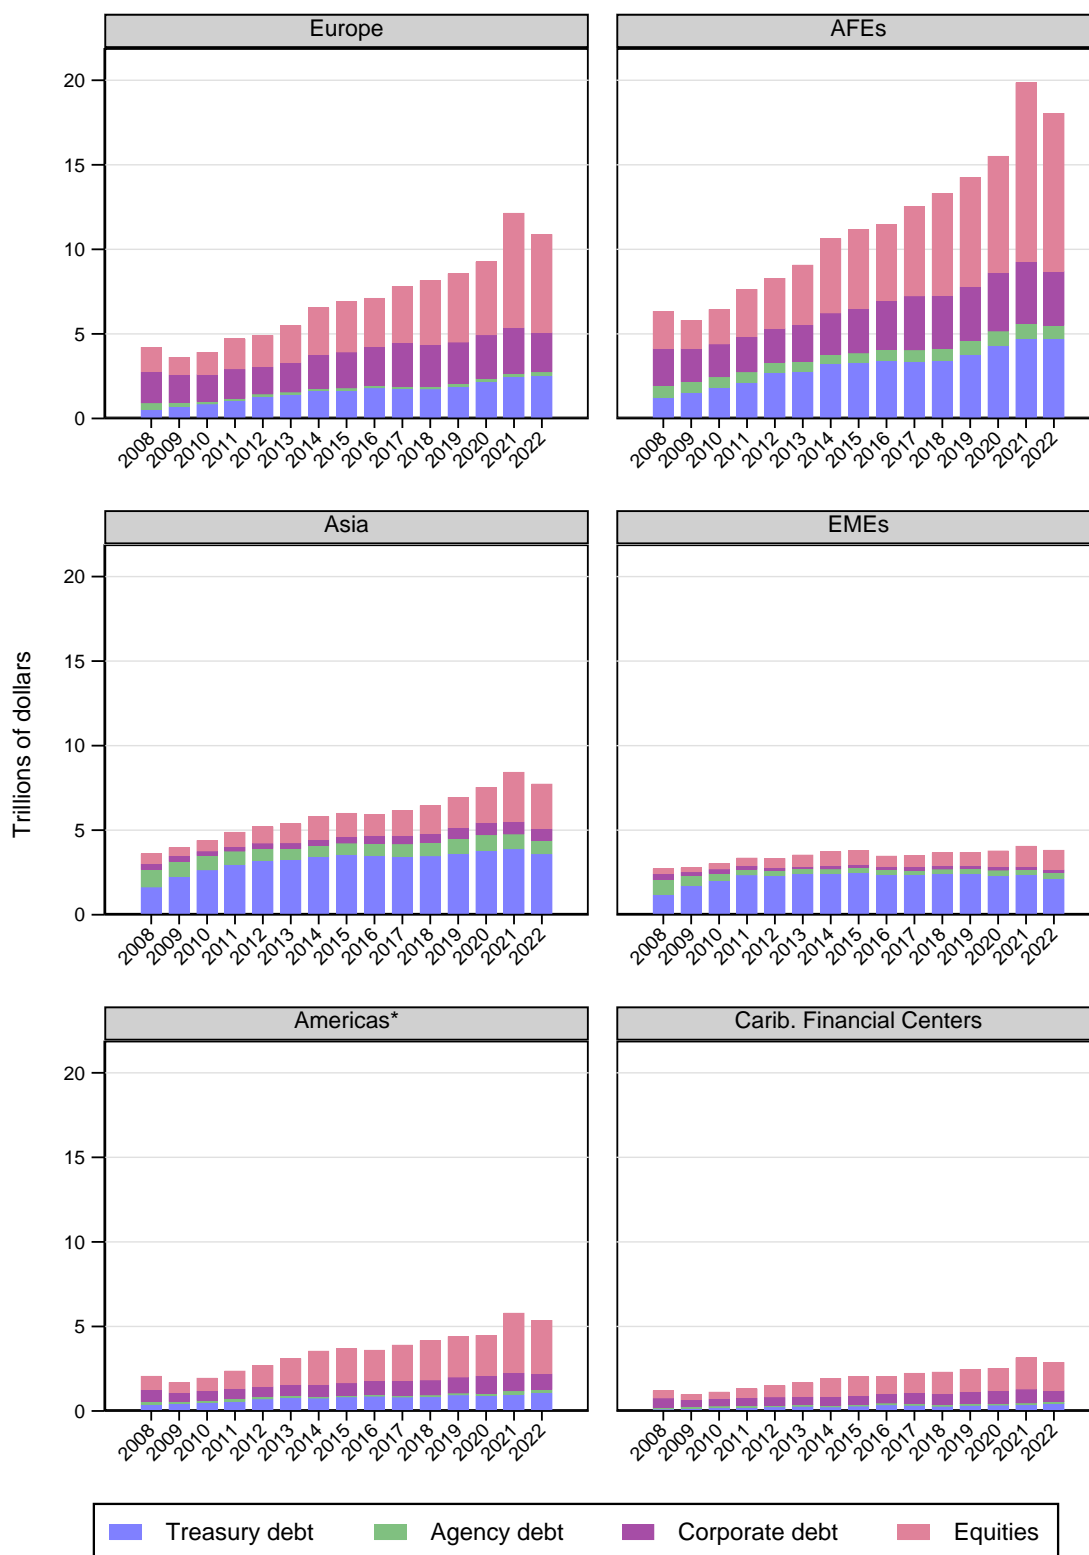

Therefore, the decrease in foreign holdings between the 2021 and 2022 surveys that can be attributed largely to equity losses accrued primarily to AFE investors. Holdings in Caribbean financial centers may also largely represent holdings of advanced economy investors, including those of U.S. investors.¹² By geographical region and type of economy, total foreign holdings of U.S. securities decreased for all regions shown in 2022. By type of economy, AFEs showed the largest decrease, mainly in holdings of equities.

¹⁰ See Table 2 in [Treasury and Federal Reserve Foreign Exchange Operations: April - June 2022](#).

¹¹ Caribbean financial centers continued to account for more than half of all securities investment attributed to the Americas region. The “Americas” (bottom left) panel of Exhibit 6 includes Caribbean financial centers.

¹² See Chapter 3 for a discussion of the residency reporting basis. Investment funds in financial centers such as the Cayman Islands hold securities on behalf of investors that may be from other countries.

Exhibit 6: Foreign Holdings of U.S. Securities for Selected Regions
By Broad Security Type

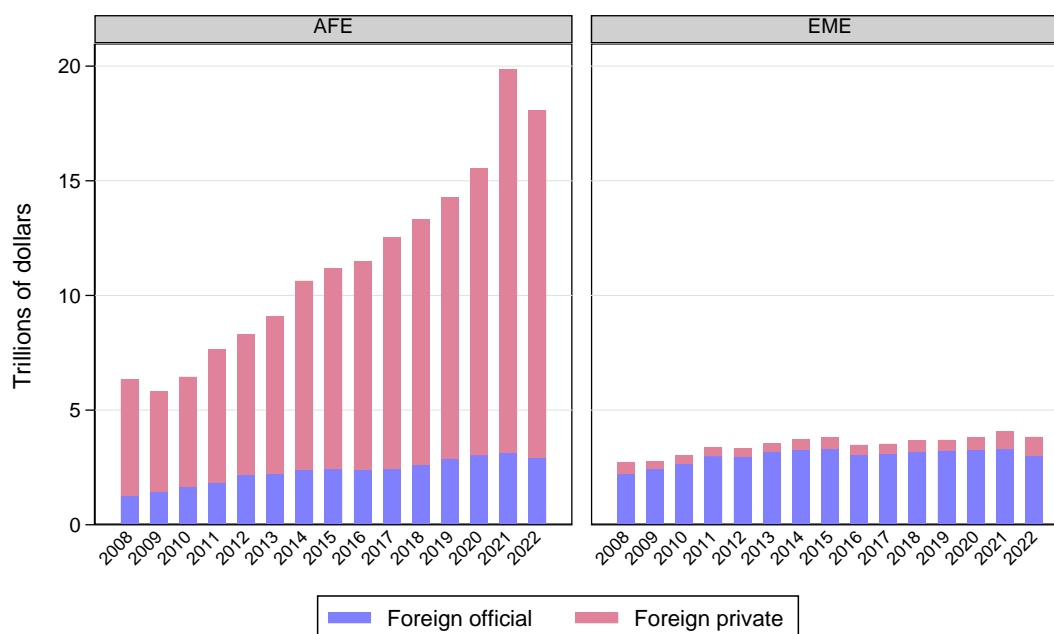

*Caribbean financial centers are included in the Americas.

Foreign Holdings of U.S. Securities by Type of Economy and Sector of Holder

The geographic patterns of securities by type of holdings and sector of holder (official and private) are closely linked. Exhibit 7 shows that AFE holdings are predominantly holdings of private investors, who, as noted in Exhibit 6, hold riskier securities such as equities and corporate bonds to maximize risk-adjusted returns. This concentration in U.S. equities, which experienced significant valuation losses in 2022, explains the decline in AFE private holdings since the previous survey. In contrast, emerging market economy (EME) holdings are dominated by official holdings and are largely concentrated in Treasuries, as shown in Exhibit 6. Foreign official investors, in particular foreign central banks, generally hold Treasuries because they are among the safest and most liquid securities in the world.

Exhibit 7: Foreign Holdings of U.S. Securities by Type of Economy and Sector of Holder

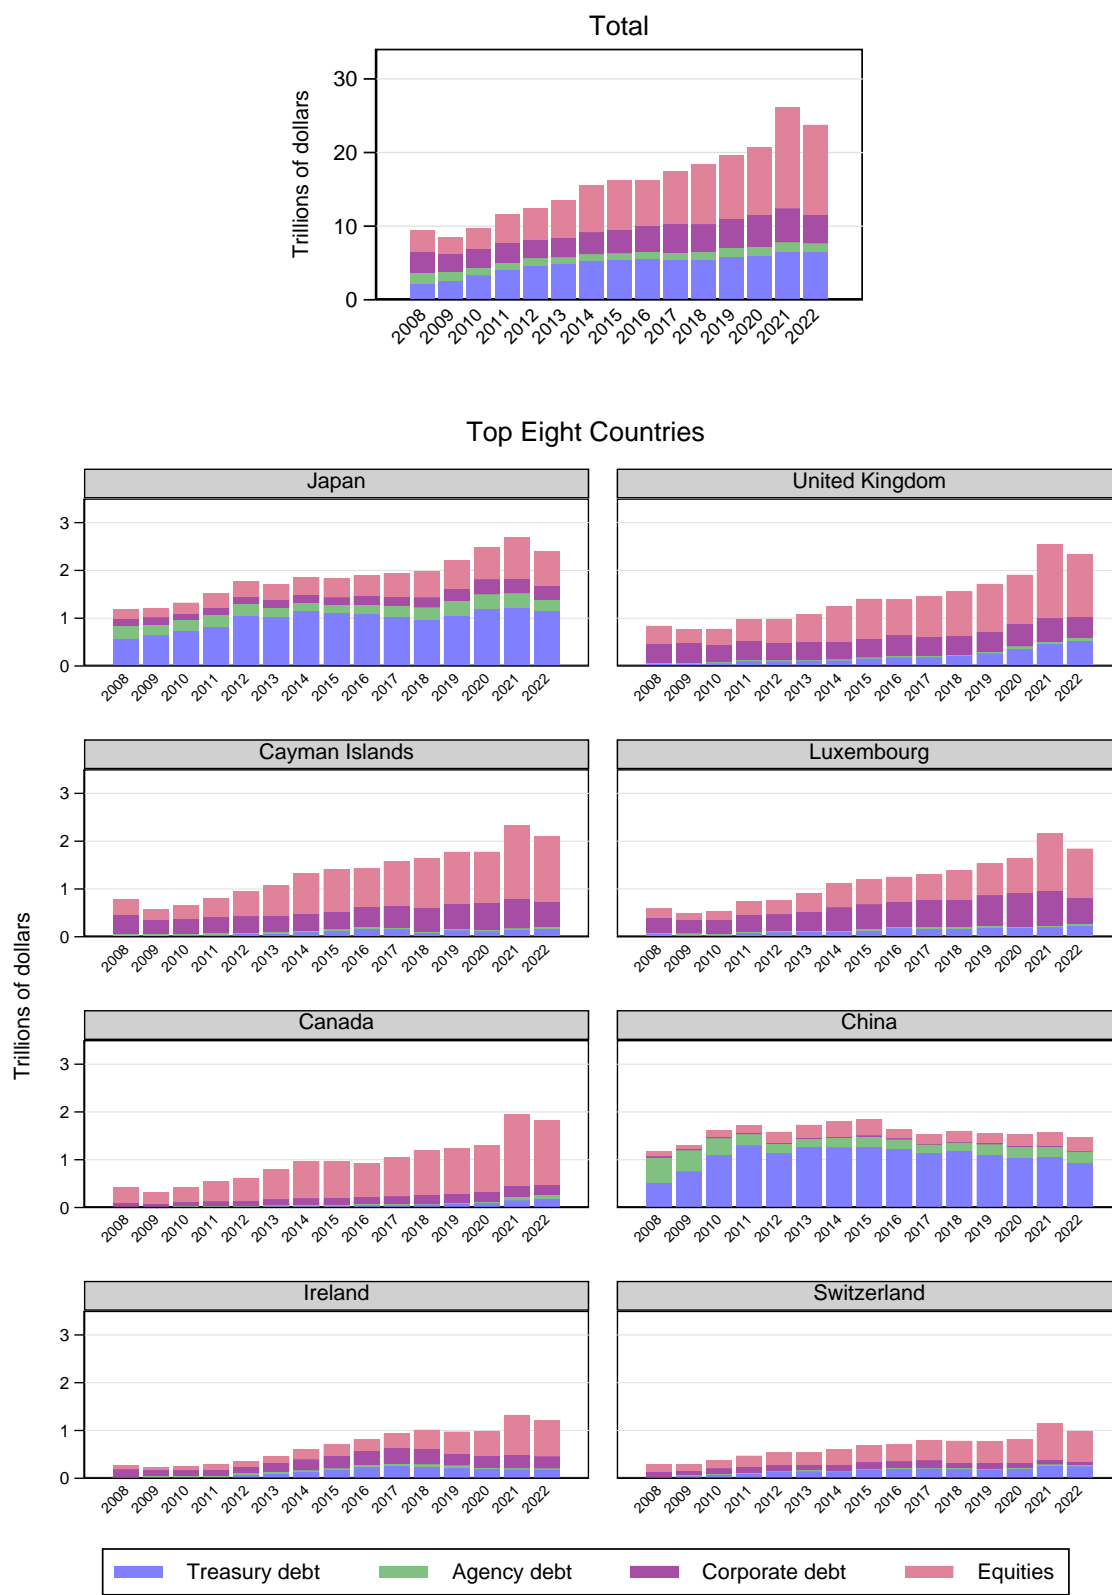

Foreign Holdings of U.S. Long-Term Securities by Major Investing Country

Exhibit 8 shows foreign holdings of U.S. long-term debt and equity securities by year and major investing country. The top panel shows an aggregate of all countries, and the panels below show the eight countries with the largest long-term securities holdings in 2022. Each of these eight countries reported decreased holdings in 2022; in most countries, this decline was driven by decreased holdings of equities. Holdings of Treasuries in China and holdings of corporate debt in Luxembourg also dipped in 2022, in large part reflecting the valuation losses noted above. Each of these top foreign holder countries reported around \$1 trillion to \$2 trillion of U.S. securities holdings overall. The largest foreign holder of U.S. debt (mostly

Treasuries) is Japan, closely followed by China. The U.S. portfolios of the remaining top foreign holders are primarily concentrated in equities.

Five of the top foreign holders --- the Cayman Islands, the United Kingdom, Luxembourg, Ireland, and Switzerland --- are financial centers in which substantial amounts of securities owned by residents of other countries are managed or held in custody. Moreover, three of these financial centers --- the Cayman Islands, Luxembourg, and Ireland --- have large financial industries with many international investment funds whose holders need not be, and often are not, residents of those countries. Switzerland holds a larger share of U.S. securities in equities relative to other financial centers, particularly Luxembourg, which holds sizeable shares of corporate debt.

Exhibit 8: Foreign Holdings of U.S. Long-Term Securities
By Major Investing Countries

Appendix Table A1 shows holdings of total U.S. securities and Tables A2 through A4 show holdings of U.S. equities, long-term debt securities, and short-term debt securities, respectively, for all countries with non-zero holdings as of the most recent eight surveys. Appendix Tables A5 through A10 break down the types of U.S. securities with more detail for all countries with non-zero holdings in 2022.

Foreign Holdings of U.S. Long-Term Securities by Type of Holder

As shown in the top left panel of Exhibit 9, foreign official investors account for a significant, though generally declining, share of total foreign holdings of U.S. long-term securities.¹³¹⁴ The foreign official share of U.S. securities holdings in 2022 was essentially unchanged from 2021.

The upper right panel of Exhibit 9 displays the overall composition of foreign official holdings over time. Foreign official investors mostly hold Treasuries, although in recent years, the share of foreign official holdings comprised of Treasuries has trended downwards as the share comprised of equities has trended upwards.

Foreign official holdings account for the majority of foreign Treasury holdings (middle left panel) and agency holdings (middle right panel) but account for a much smaller share of corporate debt and equity holdings (lower panels).

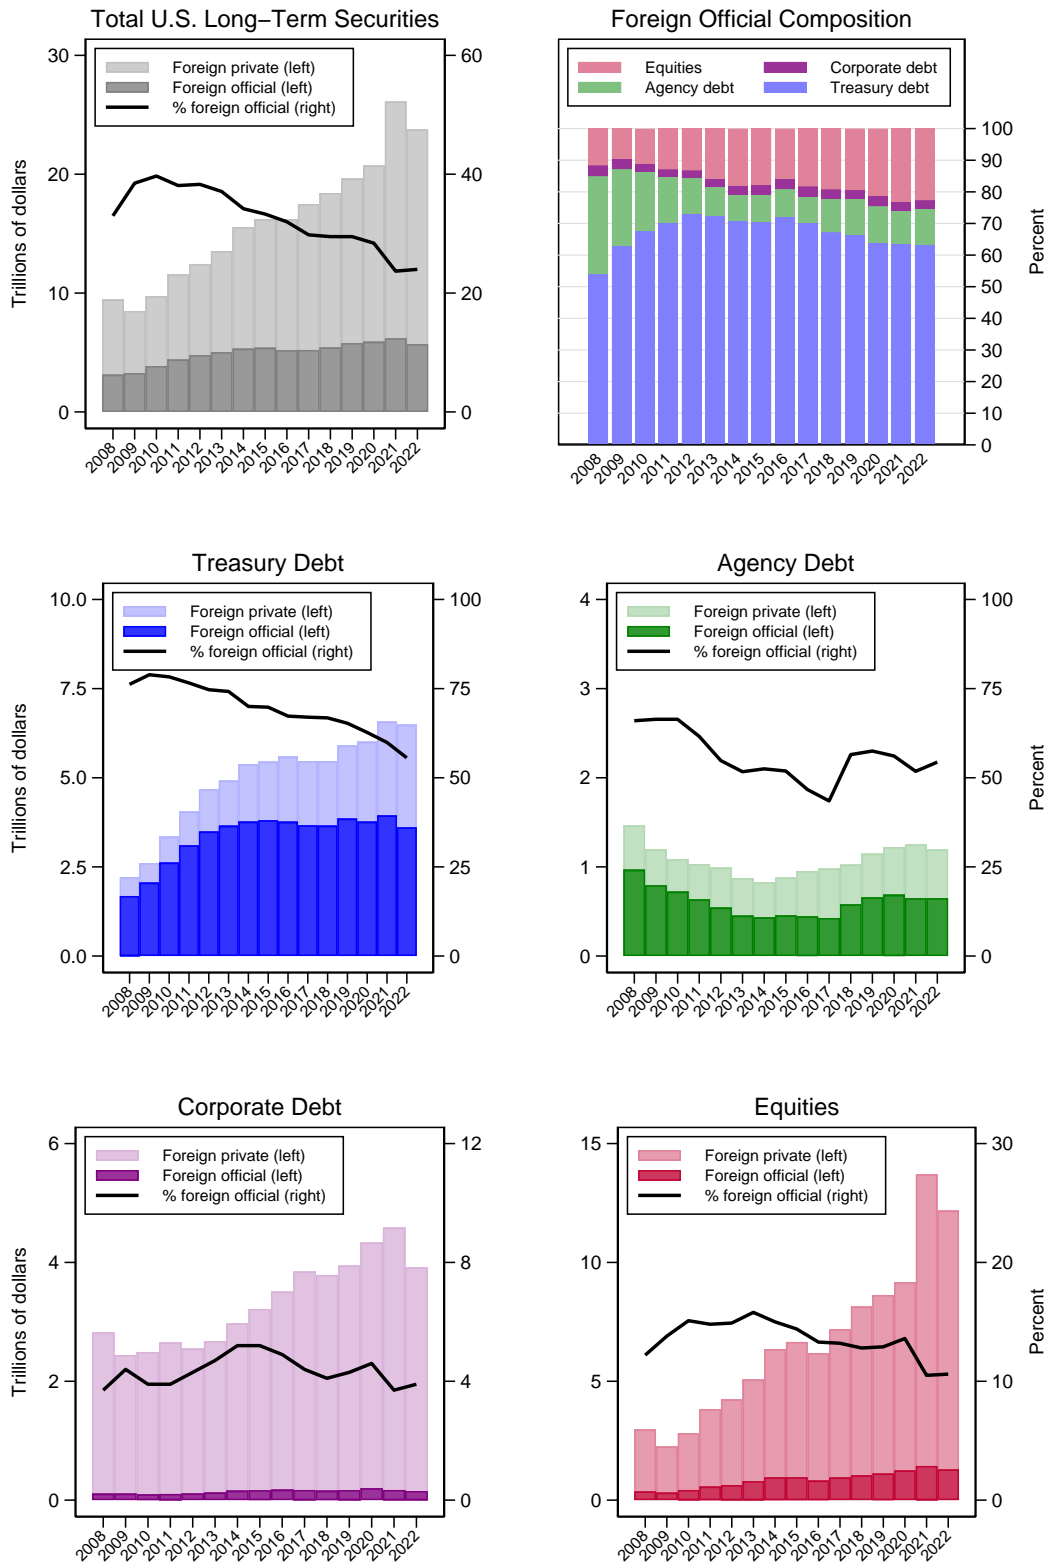

By security type, the dollar values of foreign official holdings stepped down slightly in 2022 for all categories except agency debt, which remained about unchanged. Foreign official shares of total foreign holdings continue to move in line with trends from previous years. After peaking at around 80 percent after the 2008 financial crisis, the foreign official share of total Treasuries held by foreigners has gradually declined below 60 percent (middle left panel). In contrast, the foreign official share of U.S. agency debt has been relatively steady in recent years, possibly reflecting a desire by foreign official investors to hold high-credit-quality U.S. dollar assets with somewhat higher returns than U.S. Treasuries.¹⁵

¹³ At nearly 40 percent, official investors' share of foreign holdings in 2010 was the highest in recent years and high but not unprecedented relative to the 1990s. From 1974 to 1984, foreign official investors also accounted for about 40 percent of foreign holdings of U.S. long-term securities.

¹⁴ Distinguishing official from private holders in the surveys can be difficult for the same reasons that obtaining accurate information on the country of foreign owners of U.S. securities is difficult: in both cases, chains of financial intermediaries can obscure the true foreign holders. Thus, some holdings attributed to private intermediaries, especially in major custodial centers, may actually reflect holdings of foreign official institutions.

¹⁵ In contrast to the increased foreign official holdings of agency debt shown in the 2019 and 2020 surveys, the increase shown for 2018 is largely the result of a data revision discussed in the 2018 TIC Liabilities report. As of the June 2018 survey and the December 2017 TIC Form SLT, data on agency holdings were revised to correct a reporting error. Of the 2018 increase for official holders shown in Exhibit 8, about \$120 billion is attributable to a shift in long-term agency debt securities from private holders to official holders.

Exhibit 9: U.S. Long-Term Securities by Foreign Holder Sector

Foreign official holdings of long-term corporate bonds and equities have grown relatively slowly since 2008 and account for smaller shares of foreign official holdings of U.S. long-term securities.

Foreign Holdings of U.S. Short-Term Securities by Type of Holder

Foreign private holdings of U.S. short-term securities increased in 2022, while foreign official holdings of U.S. short-term securities inched down (Exhibit 10).

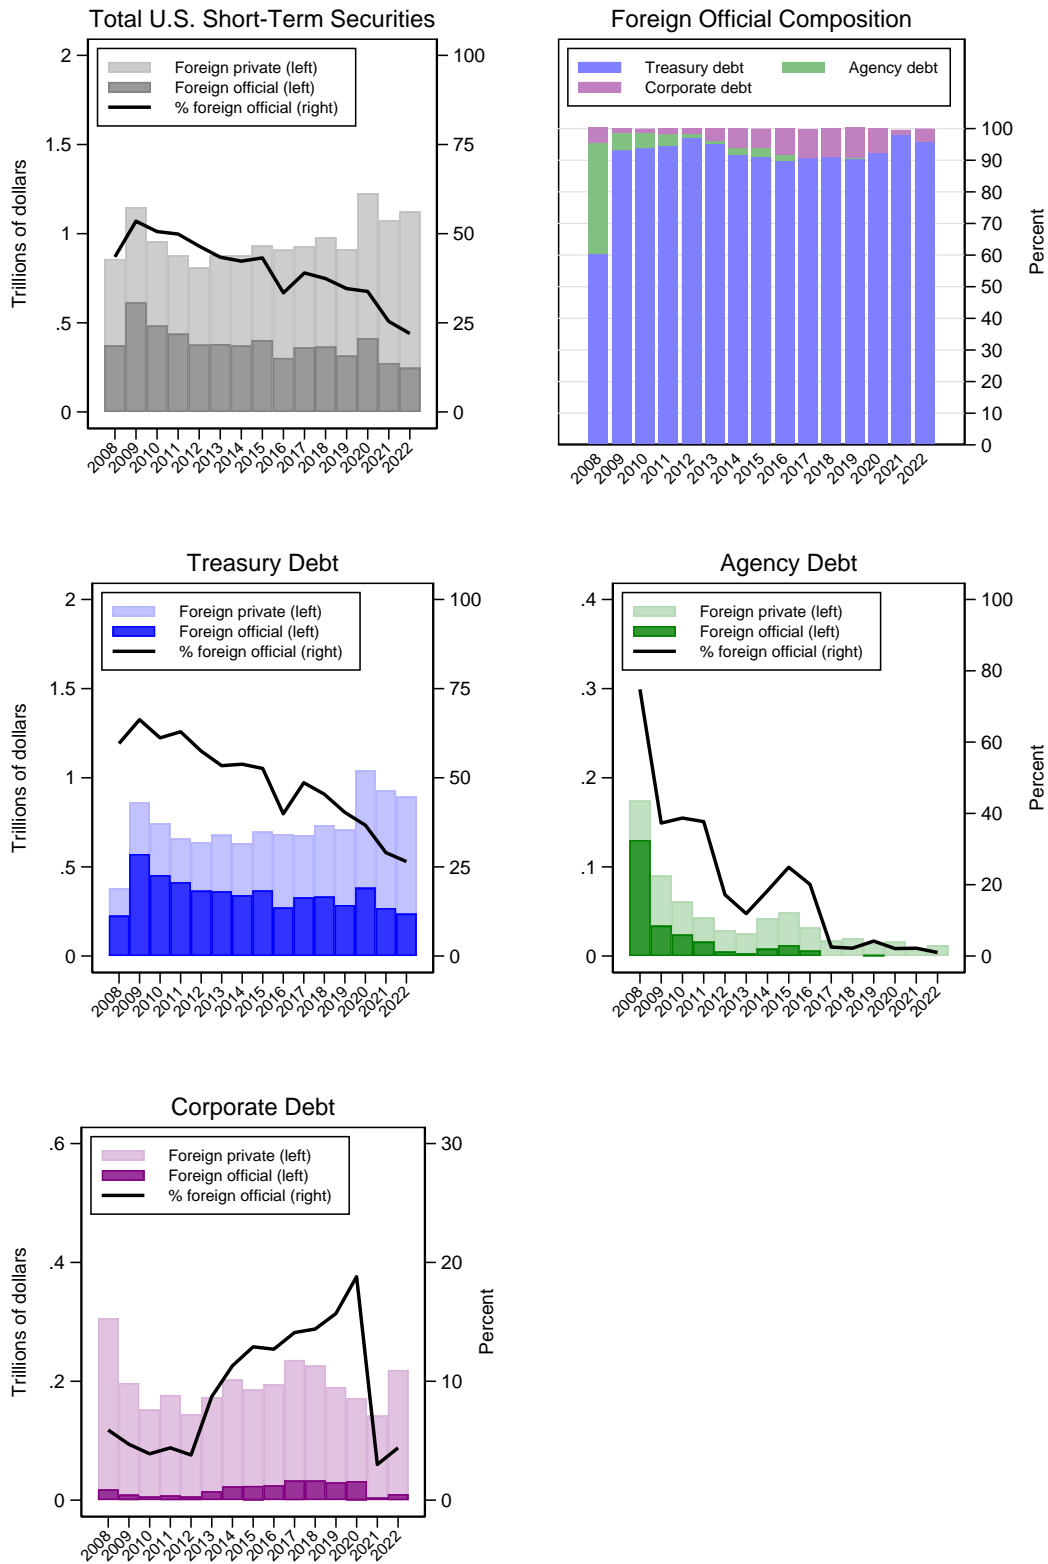

The upper right panel of Exhibit 10 displays the overall composition of foreign official holdings of U.S. short-term securities over time. Over 95 percent of foreign official holdings were Treasuries in 2022, with the remainder in corporate debt. This composition has been stable since about 2017, when foreign official investors sold nearly all of their remaining holdings of short-term agency debt.

Foreign official holdings accounted for about 25 percent of total foreign short-term Treasury holdings (middle left panel) but only about 1 percent of short-term agencies (middle right panel) and 4 percent of corporate debt (bottom left panel).

The foreign official share of short-term Treasury holdings continued to fall, as foreign private holdings have generally grown since 2008 (middle left panel). Similarly, the dollar value of foreign official holdings of short-term Treasuries edged down in 2022 from the recent high in 2020. Foreign holdings of short-term Treasuries tend to move with large changes in issuance. From 2019 to 2020, foreign investors increased their holdings of short-term Treasuries substantially as issuance expanded, with the increase especially notable for private investors. Foreign holdings have since declined as short-term issuance has contracted. Similarly, during the 2008 financial crisis, foreign holdings ramped up as issuance expanded in 2009 before falling back in subsequent years.

The foreign official share of short-term agency securities has also fallen dramatically since 2008, and foreign official holdings of agencies were nearly zero in 2022 (middle right panel) due to sharp drops in short-term agency debt issuance over this period.

Exhibit 10: U.S. Short-Term Securities by Foreign Holder Sector

The vast majority of foreign-held short-term corporate debt is held by private investors (lower left panel). After rising sharply in 2008 to reflect large issuance of asset-backed commercial paper (ABCP), total foreign holdings of short-term corporate debt have generally fallen. In 2022, both foreign official and foreign private holdings stepped up, although private holdings increased more significantly.¹⁶ Additional data on foreign official holdings are presented at the bottom of Appendix Tables A5 through A10.

Foreign Holdings of U.S. Securities by Industry of Issuer

Among all industries of the economy, the government industry (NAICS 92) had the highest level of foreign investment (Exhibit 11).

Exhibit 11: Foreign Holdings of U.S. Securities by Industry

Billions of dollars

NAICS Code	Industry	Total	Equity	Debt	
				Long-term	Short-term
21	Mining, quarrying, and oil and gas extraction	243	169	73	1

92	Government ¹	7,414	*	6,521	894
	All other industries	625	230	348	48
	Total	24,893	12,177	11,591	1,124

1. The government industry includes primarily U.S. Treasuries and also some bonds issued by state and local governments. When state and local bonds are clearly associated with a particular industry, such as utilities or education, they are classified by that industry.

In 2022, these holdings accounted for more than one-quarter of all foreign holdings of U.S.

¹⁶ The large decline in short-term corporate debt holdings by FOIs between 2020 and 2021 is a result of a reclassification from FOI to private holdings for a few countries as part of a technical data revision.

securities and about half of foreign holdings of debt securities. These holdings were primarily Treasury securities but also included some state and local debt (see Exhibit 13).

The second-largest industry for foreign investment was “Funds, trusts, and other financial vehicles.” Foreign holdings of this industry were almost entirely equity. Additional industries attracting considerable foreign investment were “Other financial”¹⁷, “Services,” “Computer and electronic product manufacturing,” “Publishing and broadcasting”¹⁸, and “Chemical manufacturing.” Foreign investment in most of the nonfinancial industries is concentrated in equity, and this concentration increased further since the previous survey. Additional details about industry holdings are in Appendix Table A11.

Foreign Holdings of U.S. Equities by Major Investing Country

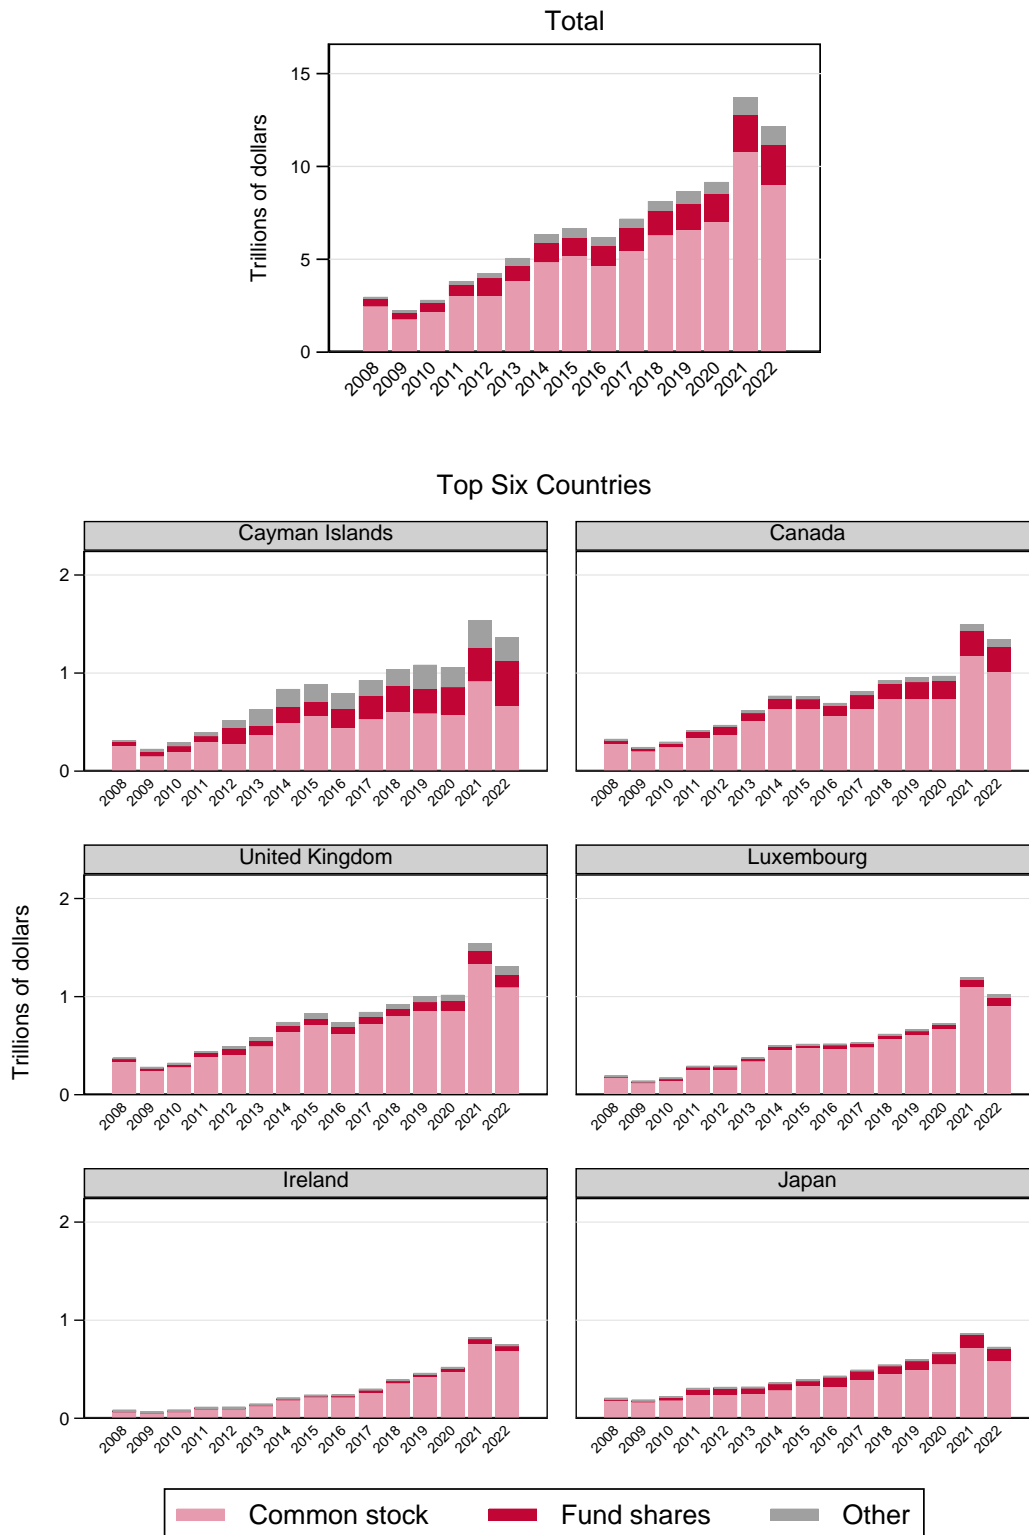

Total foreign holdings of U.S. equities fell in 2022 (Exhibit 12), largely driven by significant valuation losses. Almost 75 percent of total foreign holdings of U.S. equities were in the form of common stock, over 15 percent were fund shares, and the remainder was other types of equities (top panel).¹⁹ The top six foreign holders of equity (the Cayman Islands, Canada, the United Kingdom, Luxembourg, Ireland, and Japan) accounted for about half of total foreign holdings of U.S. equities. The Cayman Islands, a major center for offshore incorporation of managed funds, held relatively more fund shares and “other” equity than the other top countries. Appendix Table A8 shows holdings of these different types of equity for all countries with positive equity holdings in 2022.

¹⁷ These entities are mainly real estate finance and the holding companies of complex financial institutions such as bank holding companies. In fact, many of the largest depository institutions are part of larger bank holding companies that engage in a variety of financial activities. Therefore, these holding companies, which often issue a significant portion of the equity and debt for the whole entity, are classified as “Other financial.”

¹⁸ The 2022 survey used the NAICS 2022, while the 2021 survey used NAICS 2012. Some codes in the NAICS 2012, “Telecommunications and information services” industry were reclassified to the “Publishing and broadcasting” industry in NAICS 2022. This reclassification contributes to the large changes between Exhibit 11 and the analogous exhibit in the 2021 TIC Liabilities Report.

¹⁹ As explained in the Technical Notes, “funds” include many different types of investment company shares issued by U.S.-resident entities, such as open-end funds, closed-end funds, money market mutual funds, hedge funds, and exchange-traded funds (ETFs). Such funds may invest in a variety of assets, including bonds, real estate, commodities, and foreign-issued equities as well as U.S. equities; however, the data reported are for foreign holdings of the fund shares and not the underlying securities held by the funds. The residual “other” category includes preferred stock as well as interests in limited partnerships and other equity interests.

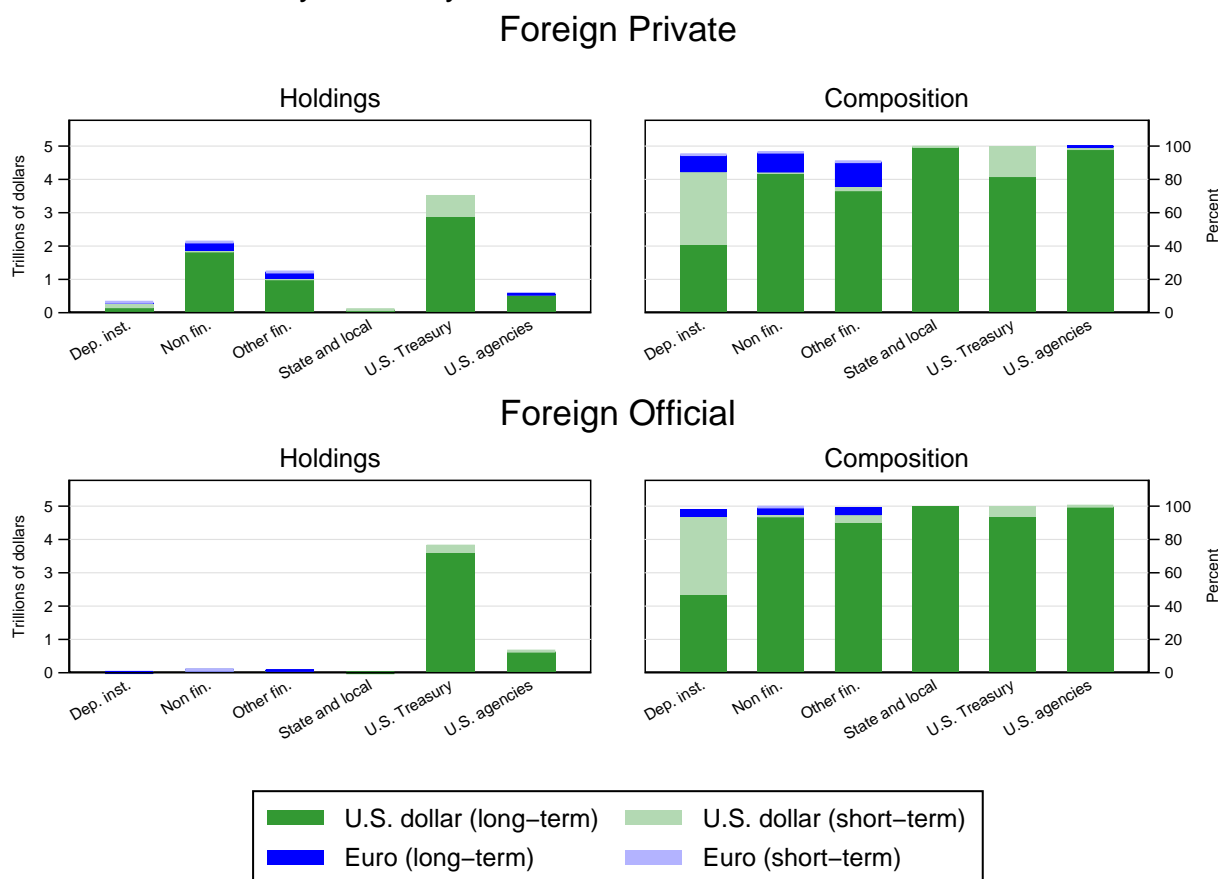

Exhibit 12: Foreign Holdings of U.S. Equities
By Major Investing Country and Equity Type

Foreign Holdings of U.S. Debt by Term, Currency, and Type of Holder and Issuer

U.S. debt held by foreigners is almost entirely denominated in dollars and euros (Exhibit 13). (The remaining share of U.S. debt denominated in other foreign currencies is very small and shown separately in Exhibit 14.) However, the currency composition of these foreign holdings varies by type of security holder and issuer.

Exhibit 13: Composition of Foreign Holdings of U.S. Debt by Currency, and Sector of Holder and Issuer

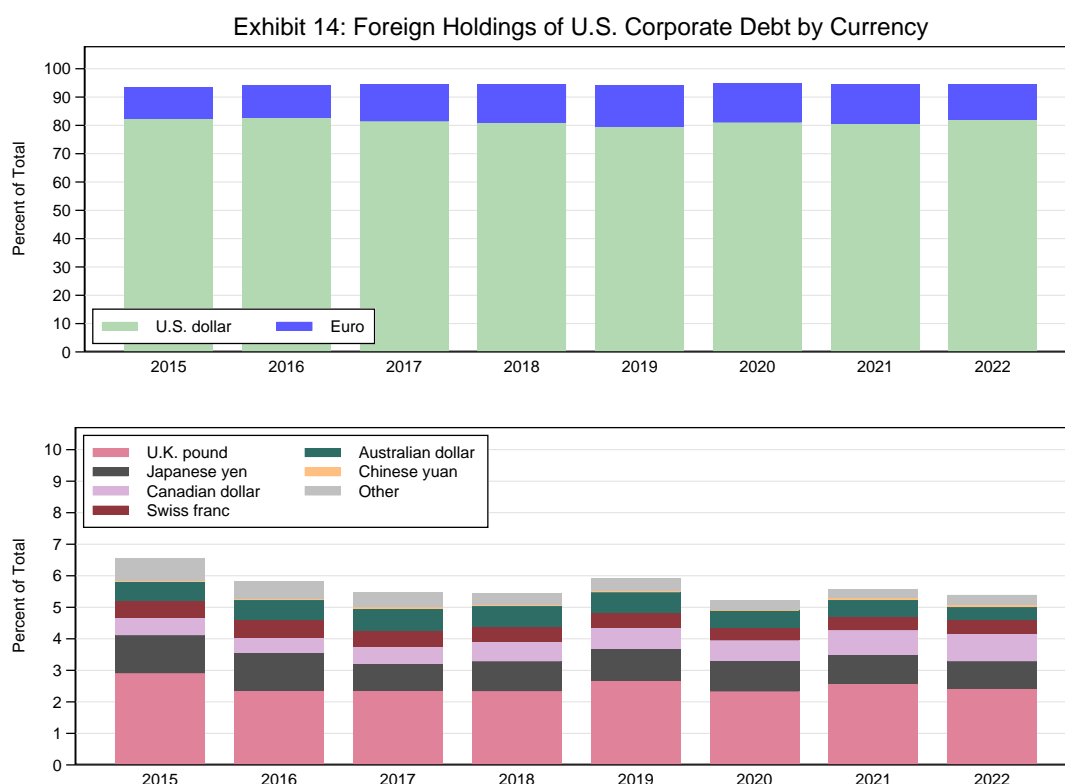

Foreign private investors' holdings of Treasuries, agencies, and debt issued by state and local governments are essentially only denominated in dollars, reflecting the fact that these types of U.S. debt are rarely denominated in foreign currencies (upper panels). Foreign official investors' holdings, which are concentrated in Treasuries and agencies, are likewise nearly entirely denominated in dollars (lower panels). Less than half a trillion dollars of U.S. long-term other financial corporate debt securities and U.S. long-term nonfinancial corporate debt securities owned by foreigners are denominated in foreign currencies, with the most frequently held foreign currency being the euro. Together, securities denominated in dollars and euros account for more than 90 percent of U.S. corporate securities held by foreign

private investors and for essentially all foreign official holdings. Appendix B Exhibit 13 presents a more detailed breakdown of foreign holdings of U.S. debt by term, currency, and holder and issuer type.

Trends in Foreign-Held U.S. Corporate Debt by Currency

While over 95 percent of foreign-owned corporate debt is denominated in either U.S. dollars or euros (Exhibit 14, top panel), the remaining 5 percent is split more evenly between other major currencies (bottom panel). Since 2015, the U.S. dollar share of foreign-owned U.S. corporate debt securities has remained at about 80 percent, with fluctuations of a few percentage points, largely tracking exchange rate movements. The euro continues to be the most heavily used foreign currency for foreign holdings of U.S. debt securities by a wide margin. The dollar value of foreign currency-denominated debt tends to increase when the dollar depreciates, such as between 2016 and 2018, and decrease when the dollar appreciates, such as between 2019 and 2020 and again between 2021 and 2022. The slight decline in the foreign currency-denominated share of corporate debt in 2022 was driven by the sharp appreciation of the dollar especially in the first half of 2022.

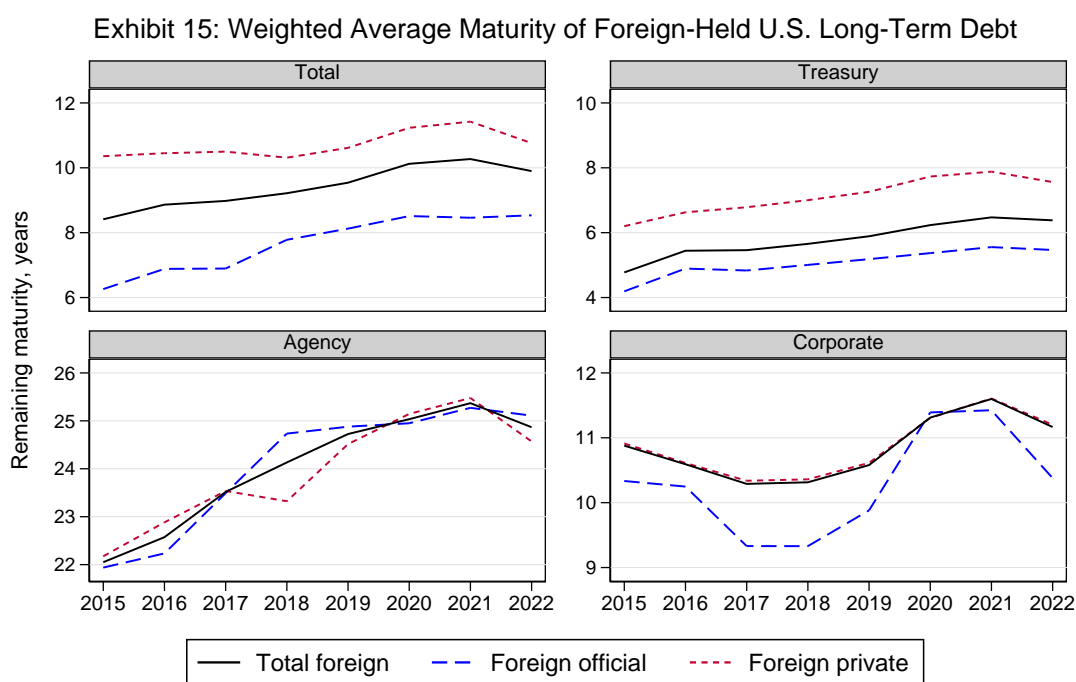

Maturity Structure of Foreign-Held U.S. Long-Term Debt

The weighted average maturity of all U.S. long-term debt securities held by foreigners is about 10 years (Exhibit 15, upper left panel). Foreign holdings of long-term Treasury

securities are more concentrated at shorter maturities than are holdings of agency or corporate debt, with an average maturity of a bit over 6 years. The average maturity of corporate debt securities is just over 11 years, while the average maturity of agency securities is nearly 25 years.

Foreign official holdings have a notably shorter average maturity---about 8.5 years for total long-term debt securities---compared to about 11 years for foreign private holdings. This difference comes mainly from foreign official holdings of long-term Treasuries, which have an average maturity about 2 years less than that of foreign private holdings of long-term Treasuries. Average maturities of private holdings stepped down in 2022 after trending upwards for several years, while average maturities of official holdings were about unchanged.²⁰

Despite an *average* maturity of more than 10 years, almost half of U.S. long-term debt securities held by foreigners mature in 5 years or less and about 70 percent mature in 10 years or less. For further analysis on the duration of investors' Treasury portfolios, see Tabova and Warnock (2022).²¹ Appendix Table A12 shows the distribution of foreign holdings by years to maturity and security type.

²⁰ The maturity structure of new issuance also plays a role in changes to the average maturity of foreign holdings.

²¹ Tabova, Alexandra M. and Warnock, Francis E. "Preferred Habitats and Timing in the World's Safe Asset," NBER Working Paper, December 2022, 1-57.

Foreign Holdings of U.S. Treasuries by Type of Holder and Type of Treasury Issue

Foreign investors hold far more of some types of Treasury issues than others (Exhibit 16). Nearly 80 percent of foreign holdings of Treasuries are long-term nominal securities, with TIPS, short-term Treasuries, and Floating Rate Notes (FRN) comprising the remaining share. Relative to all outstanding Treasury securities, long-term nominal Treasuries, TIPS, and short-term Treasuries have over 25 percent foreign ownership; in contrast, only about 15 percent of outstanding FRN are held by foreign investors. The majority of foreign holdings of FRN and short-term Treasuries are held by private investors, while foreign holdings of long-term nominal Treasuries and TIPS are more evenly split between official and private investors.

Total outstanding publicly-held U.S. government debt has steadily increased since 2015 to about \$23 trillion in 2022. Likewise, total outstanding long-term nominal Treasuries (about \$17.3 trillion), TIPS (about \$1.8 trillion), and FRN (about \$0.6 trillion) have steadily increased since 2015. For these three types of Treasury issues, however, foreign holdings have not kept pace with issuance, and their foreign-held shares have continuously fallen since 2015.

In contrast, total outstanding publicly-held short-term debt has steadily fallen since 2020 to about \$3.5 trillion, after issuance more than doubled in the spring of 2020 to finance COVID-related government spending. Foreign holdings of short-term Treasury securities have since been stable, causing the foreign-held share of short-term securities to edge upwards.

Foreign Holdings of U.S. Treasuries by Major Investing Country and Type of Treasury Issue

In most major investing countries, foreign holdings of Treasuries are concentrated in long-term nominal bonds, although the exact composition varies by country (Exhibit 17).²² Japan and China hold the most U.S. Treasuries and have been the top holding countries since at least 2008. Among top holders of Treasuries, China holds the most TIPS, followed by the Cayman Islands and the United Kingdom. Appendix Table A7 shows holdings of different forms of U.S. Treasury securities for all countries as of 2022.

²² In January 2014, the U.S. Treasury began issuing Floating Rate Notes, which have a maturity of two years and pay an interest rate that varies over time with the rates on newly issued 13-week Treasury bills. Despite their variable interest rate, because Floating Rate Notes have a maturity of two years, foreign holdings of Floating Rate Notes are included in nominal long-term debt throughout this report.

Exhibit 16: Foreign Holdings of U.S. Treasuries by Type of Treasury Issue

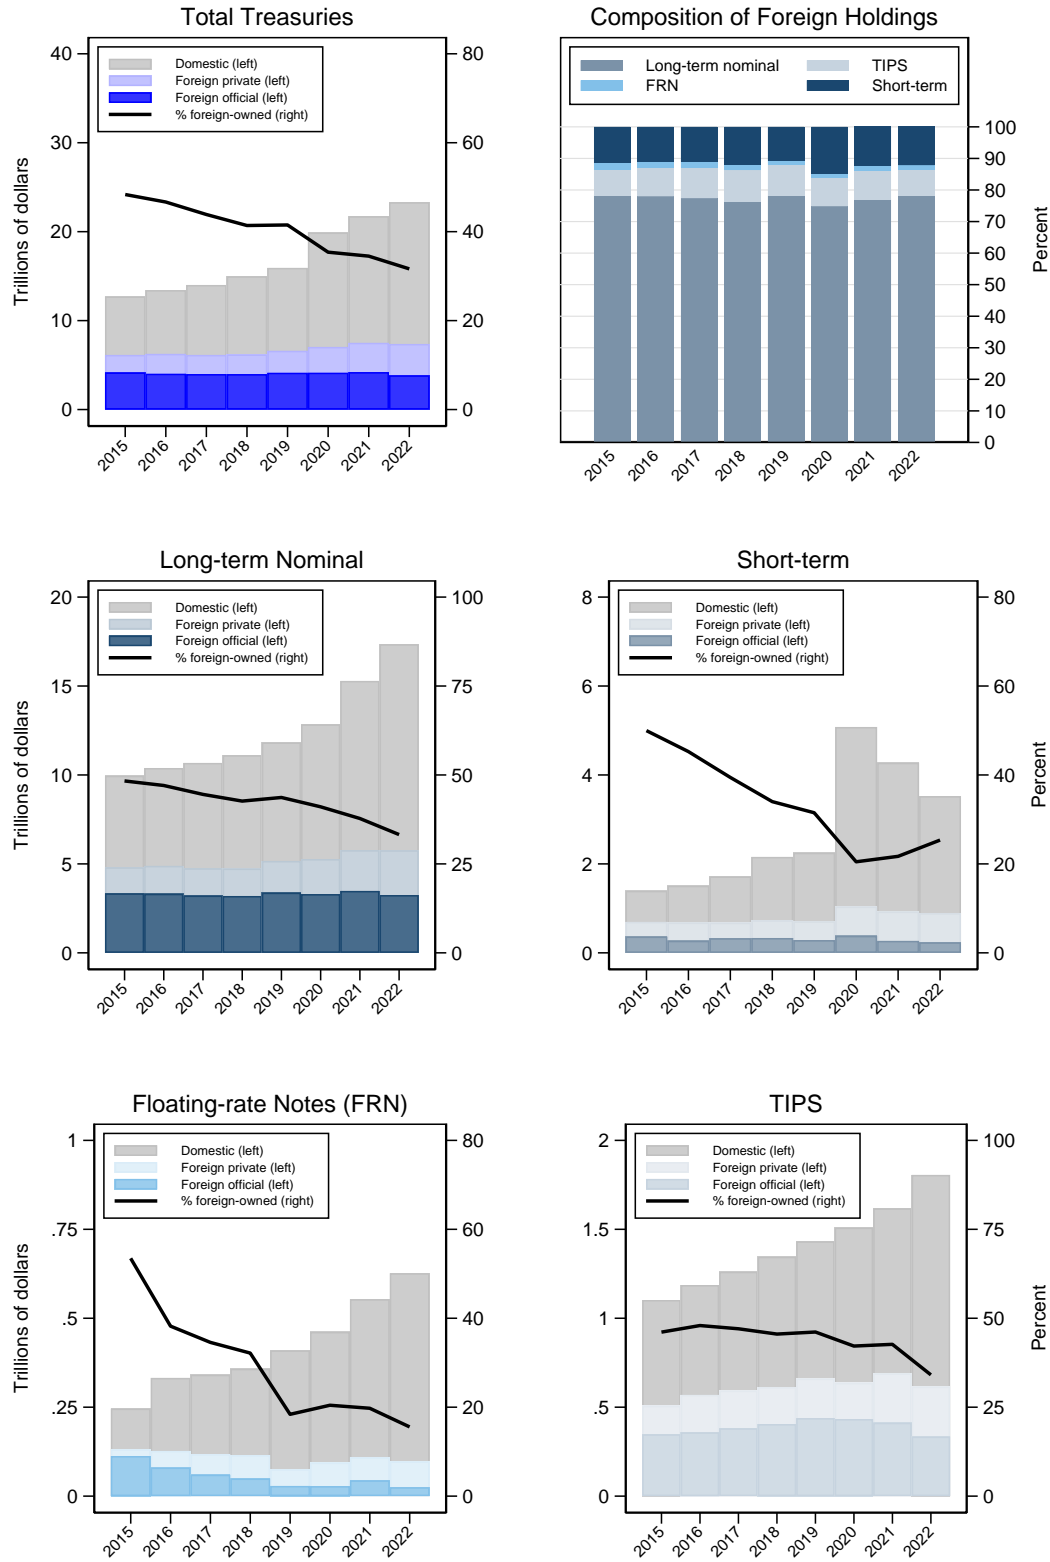

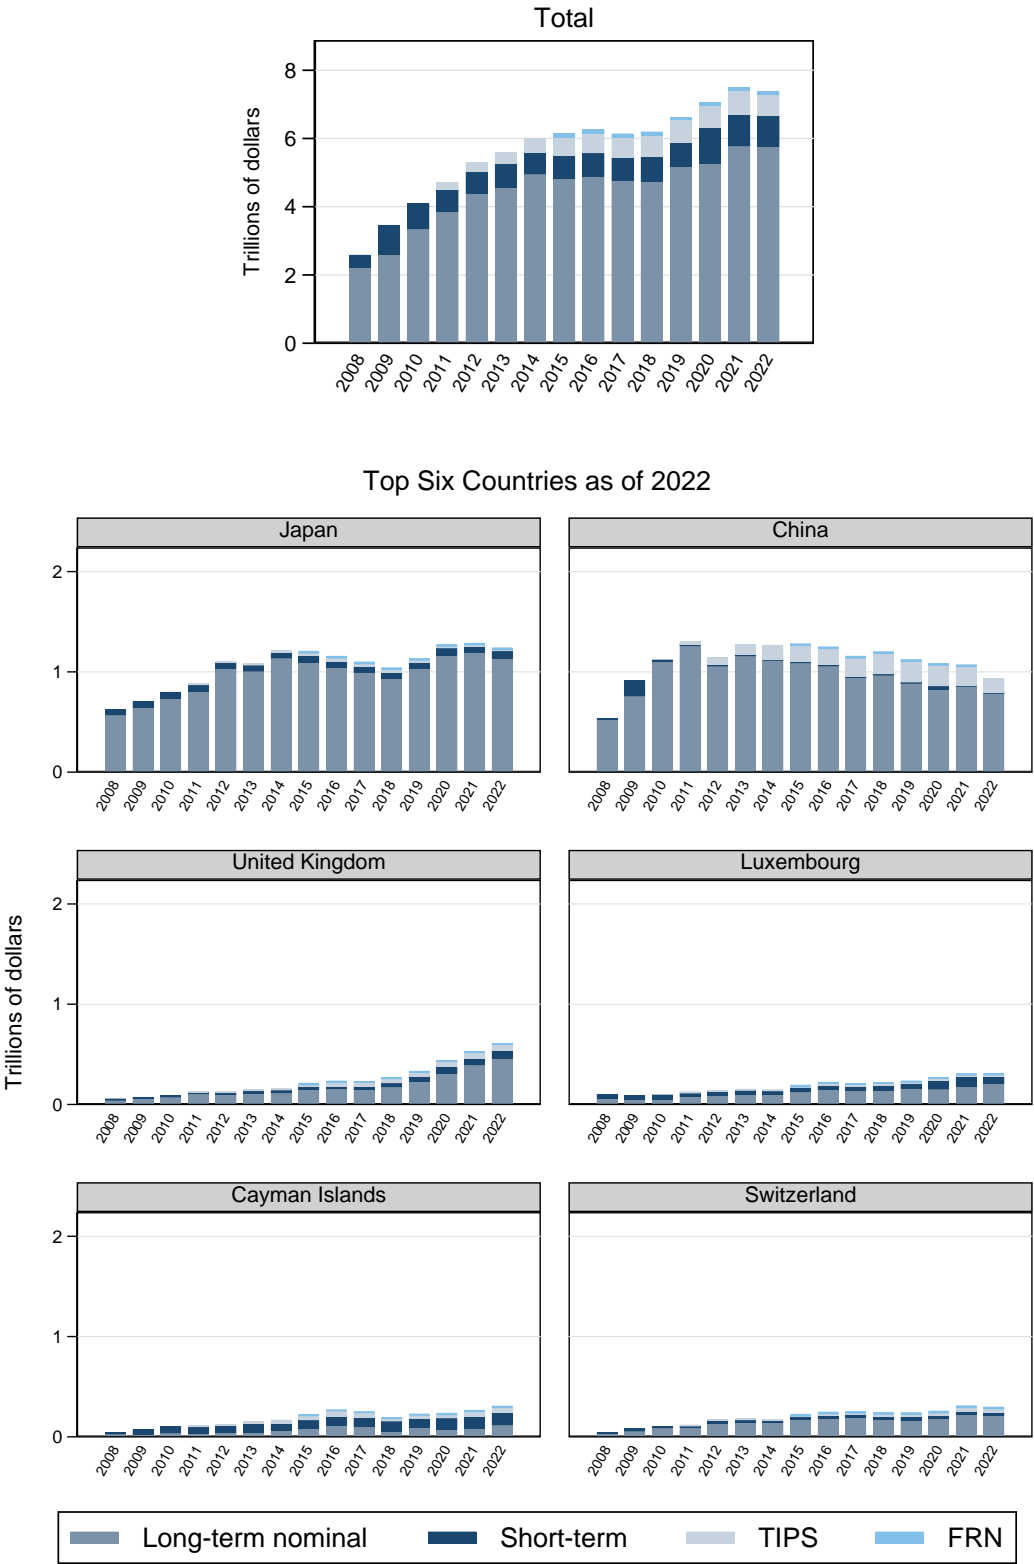

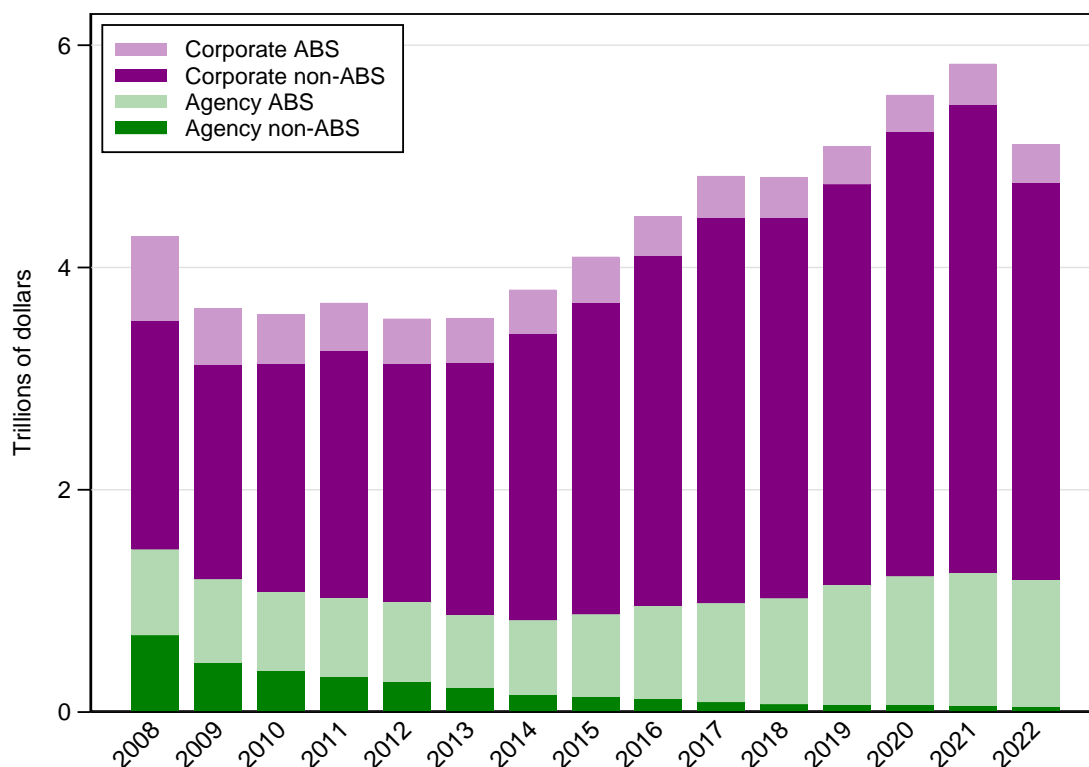

Exhibit 17: Foreign Holdings of U.S. Treasuries by Major Investing Country

Foreign Holdings of U.S. Long-Term Corporate and Agency Debt by Type

Exhibit 18 shows foreign holdings of corporate and agency debt from 2008 to 2022, grouped into four categories: corporate ABS, corporate non-ABS debt, agency ABS, and agency non-ABS debt. Foreign holdings of U.S. long-term corporate and agency debt fell in 2022, reversing a trend of steady growth in recent years. This decline was driven by decreased holdings of non-ABS corporate debt due to valuation losses from higher interest rates. In contrast, the ABS share of foreign holdings of U.S. corporate debt was about unchanged from recent years. The ABS share of agency debt has trended upwards, rising from about half of total agency debt in 2008 to almost the full amount in recent years. Meanwhile the non-ABS share has trended downwards, largely due to declining issuance of non-ABS debt by government agencies over the period. Appendix Table A9 shows holdings of long-term ABS by country and security type for all countries with non-zero ABS holdings. Japan, Taiwan, and China have the largest holdings of ABS due to their large holdings of agency securities.

Exhibit 18: Foreign Holdings of U.S. Long-Term Corporate and Agency Debt by Type

Foreign Holdings of U.S. Long-Term Corporate Asset-Backed Securities

Overall, foreign holdings of long-term corporate ABS stepped down slightly in 2022, in line with a general downward trend since 2008. Exhibit 19 splits foreign holdings of U.S.

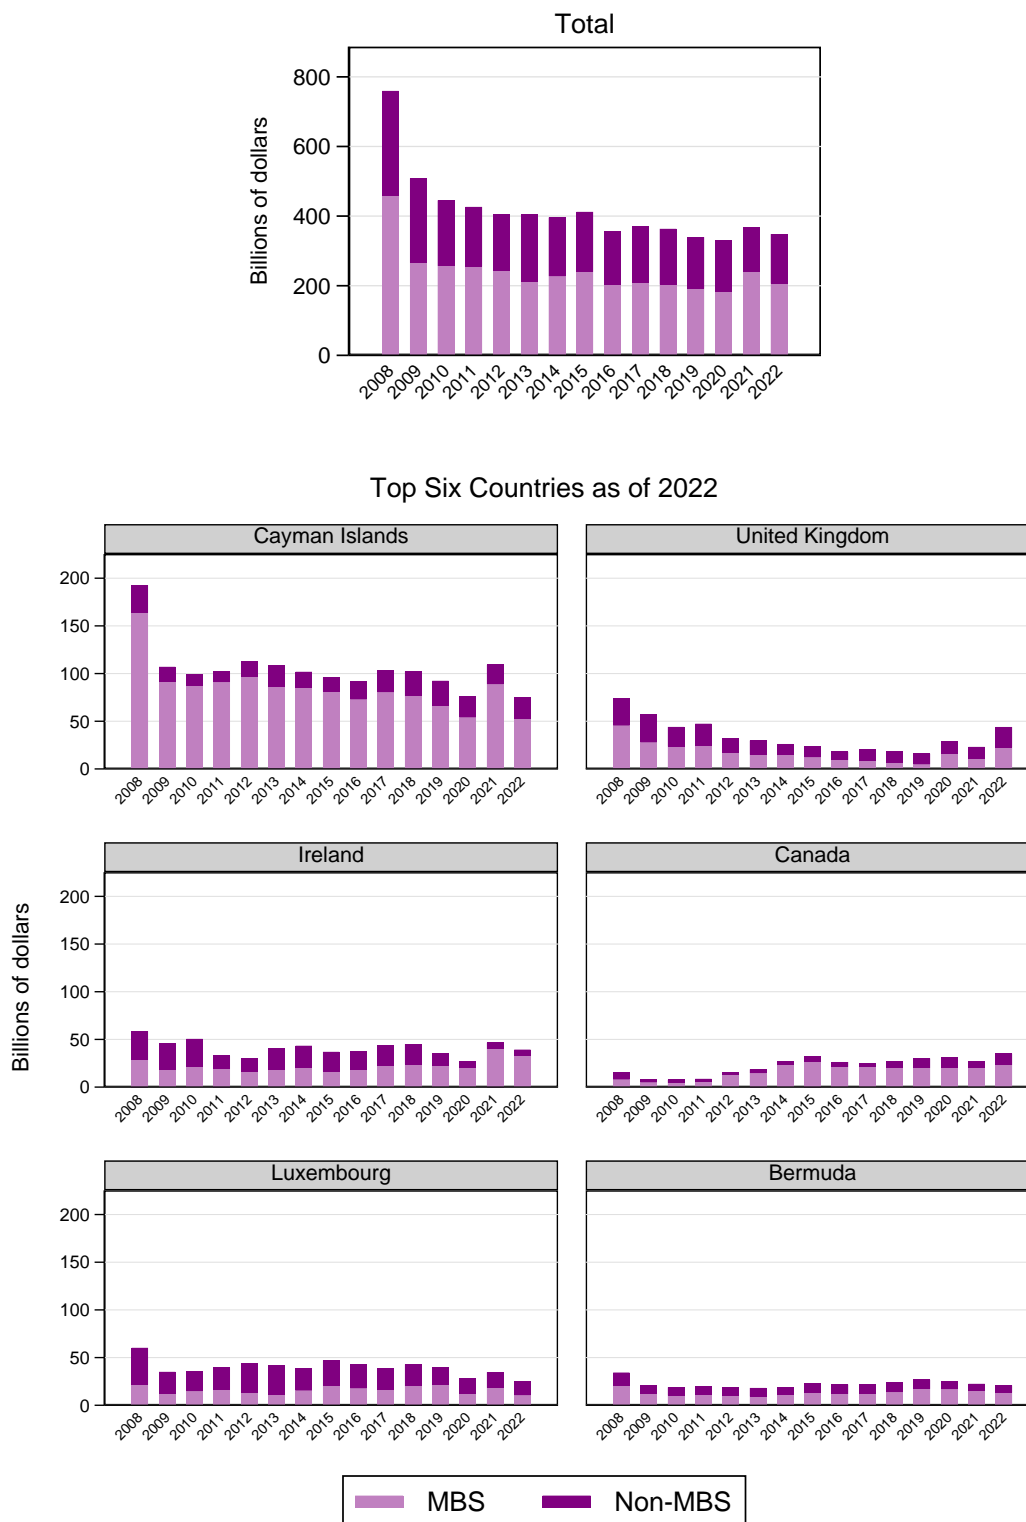

long-term corporate ABS (as shown in Exhibit 18) into those backed by pools of residential home mortgages and commercial mortgages (mortgage-backed securities, or MBS), and those backed by other types of assets, such as pools of credit card receivables, automobile loans, or student loans (non-MBS).²³ The top panel shows this breakdown for all countries since 2008, and the following panels show the same breakdown over the same time period for the top six holders in 2022. Appendix Table A9 also provides this breakdown for all countries.

In 2022, the top two holders of long-term corporate ABS securities were the Cayman Islands and the United Kingdom. Holdings in the Cayman Islands stepped down in 2022, largely driven by decreased holdings of MBS securities. This decline was mostly offset by increased MBS and non-MBS holdings in the United Kingdom, which reached levels not seen since 2011. Holdings in the other top countries -- Ireland, Canada, Luxembourg, and Bermuda -- were at similar levels compared to last year.

Foreign investors also held a small amount of short-term ABS in the form of asset backed commercial paper (ABCP). Table A10 in the Appendix presents holdings of all short-term debt securities, including short-term Treasury securities, agency securities, and corporate securities, as well as commercial paper (CP) and asset backed commercial paper (ABCP), for all countries in 2022.

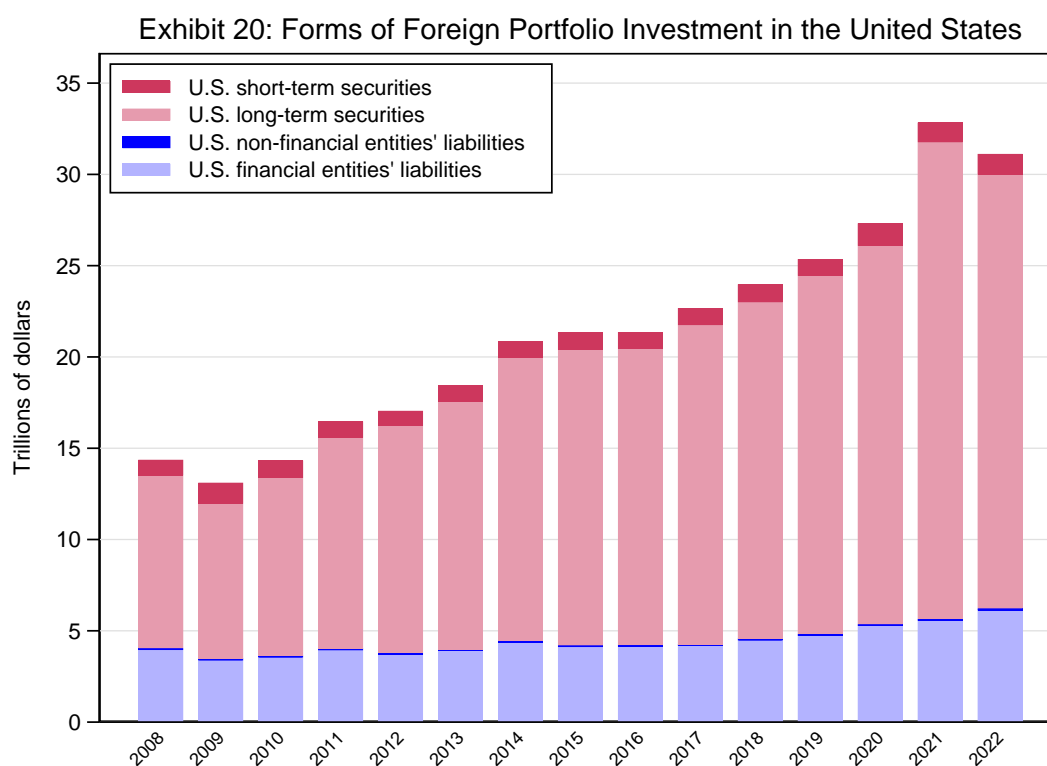

²³ A similar breakdown is not provided for agency ABS because nearly all agency ABS are backed by pools of residential home mortgages.

Exhibit 19: Foreign Holdings of U.S. Long-Term Corporate Asset-Backed Securities By Major Investing Country

Forms of Foreign Portfolio Investment in the United States

The 2022 value of foreign-held securities in holdings of U.S. assets was more than double its level in 2008, despite tracking the decline in securities valuations since 2021 (Exhibit 20). Looking back even farther, the fraction of foreign-held assets that are securities has continued its steady increase since the mid-1980s (Appendix B, Exhibit 20). In December 1984, foreign holdings of U.S. securities were about equal to holdings of other liabilities. In contrast, at end-June 2022, securities holdings were nearly five times as large as non-securities investment. Therefore, while the preceding sections of this report only discuss securities, those securities have made up a large and increasing fraction of total foreign investment into the United States.

Comparing securities to other types of liabilities omits direct investment but includes investment that is categorized in the financial account of the U.S. balance of payments as “portfolio investment” and “other investment.” In Exhibit 20, financial entities’ liabilities are custodial and own liabilities to foreigners including deposits, loans, brokerage balances, accrued interest, and insurance reserves, for example. Non-financial entities’ liabilities are custodial and own liabilities to foreigners, such as trade payables and advance receipts.

Chapter 2. Data Collection Methodology

The U.S. system for measuring foreign-resident holdings of U.S. securities consists of annual surveys, with “benchmark” surveys every five years. The benchmark surveys collect cross-border portfolio data from a large number of institutions (custodians and issuers) in an attempt to capture total foreign-resident ownership of U.S. securities. In the four years succeeding a benchmark survey, data are collected from a smaller set of respondents that collectively account for the vast majority of the holdings reported in the previous benchmark survey. The most recent SHL benchmark survey was conducted in 2019.

Prior to 2013, the panel for each of the four succeeding years was kept largely unchanged, with the panel of respondents selected based on the size of positions as reported in the most recent benchmark survey. Since 2013, the annual respondent panels for the years following a benchmark survey have been selected based on TIC form SLT (“Aggregate Holdings, Purchases and Sales, and Fair Value Changes of Long-Term Securities by U.S. and Foreign Residents”) reporting. Reporters are still generally chosen based on the overall size of their positions, but the panel is also selected to ensure comprehensive coverage across countries and asset classes and to limit movement of respondents on and off the panel.

For the 2022 survey, a non-benchmark survey, data were collected from respondents who collectively accounted for 97 percent of the 2019 benchmark survey holdings. Data were submitted by about 340 U.S.-resident issuers and custodians (including securities depositories) who were required to report, in detail, U.S. securities issued directly to a foreign resident or entrusted to their safekeeping on behalf of a foreign-resident client. Holdings were very concentrated: the 10 largest custodians reported 85 percent of the total market value. Respondents submitted a total of about 3.7 million records, of which about 2.2 million were equity records and about 1.5 million were debt records.

Data Analysis and Editing

As noted in the introduction, the surveys collect data at the individual security level, allowing for detailed analysis and the presentation of data across many dimensions, including by country, security type, currency, remaining maturity, and industry. Experience has shown that collecting security-level data produces more accurate survey results than can be obtained by collecting aggregate information, because the security-level data sometimes reveal significant errors that may otherwise go undetected. In addition, collecting security-level data is efficient because survey respondents need to report data in only one format instead of aggregating and reporting their holdings in different ways, such as those shown in the tables in this report. Security-level reporting also allows the verification of many securities’ market values.

The data reported by respondents were subject to extensive analysis and editing. The first step in the process was to analyze data at the reporter level to identify systematic errors within each respondent's submission. Respondent data that were filed during the prior year were analyzed individually and compared against the data submitted in the current year. Aggregate holdings reported in the survey were also measured against holdings reported in the other TIC monthly and quarterly forms, including the SLT and BL-2 forms, to identify and reconcile any major discrepancies between the respondents' reports as of end-June 2022.

Once the analysis of the data for each respondent was complete, the data were analyzed on a security-by-security basis, across all reporters. Securities subject to particular attention included those reported with a large market value or quantity, those with particularly high or low prices or price changes relative to the prior year's survey, and those comprising a large percentage of the total amount outstanding.

The third phase was to analyze the data according to various cumulative or "macro" groupings. At this level, the data were aggregated by categories such as country of foreign owner, type of issuer, and type of industry. This review was especially useful in eliminating cases in which the miscoding of a security with a small market value could have a large relative impact on a small category. This analysis was performed to explain significant year-over-year trends or anomalies based on business practices or economic developments, and to identify the primary contributors driving the shifts in the macro data. Additionally, as with the reporter-level review, the data were compared with reporting on other TIC forms to identify potential systemic issues.

Foreign Holdings of U.S. Long-Term Securities as Measured by the TIC Liabilities Survey and the TIC SLT Reports

Conclusions about country-level foreign holdings from the detailed securities-level SHL survey are echoed by the SLT monthly aggregate data for long-term securities. Differences between these data sources for most countries are small. Differences are concentrated in countries that are hubs for offshore debt issuance and securities custody businesses: the United Kingdom, Cayman Islands, Luxembourg, and Belgium. Exhibit 21 compares foreign holdings of long-term U.S. securities in 2022 as measured by the annual TIC SHL and the monthly TIC SLT.²⁴ Unlike the annual surveys, which collect data at the individual security level, the SLT collects data at the country-security type-month level, a significantly lower level of detail. However, the SLT has the advantage of providing information on cross-border securities holdings on a timelier basis, without resorting to the monthly estimates previously constructed from reported transactions and valuation estimates based

²⁴ The SLT began collecting monthly aggregate position data on U.S. holdings of foreign securities and foreign holdings of U.S. securities in September 2011.

on price indexes: TIC survey data are released eight to ten months after the reporting date, whereas SLT data are released about six weeks after the reporting date.

The security-level detail of the survey data allows for data adjustments that address three issues: potential double counting when custodians and issuers report the same position, securities positions not reported by issuers, and the smaller size of the annual SHL panel. The first two adjustments, for over-reporting and for unreported debt issuance abroad, affect only debt and are offsetting in direction; the third adjustment affects both debt and equity. These adjustments are described in more detail in the next section, including how and where these adjustments generate differences between the SHL and SLT. Aside from the differences related to these adjustments, the country-level distribution is largely preserved across the two reports.

First, the data were adjusted downward to remove identified cases of over-reporting, which can occur if an issuer reported debt securities issued directly into foreign markets and U.S. custodians also reported foreign holdings of those securities (see column 2 in Exhibit 22). For the 2022 survey, as in surveys since 2014, reporter-level data were used to identify securities for which both issuers and custodians reported positions. If the total amount reported for a given security by the issuer and all custodians combined exceeded the amount of the security issued, the survey position was reduced by the amount of the excess, which reduces the SHL relative to the SLT. The adjustment is generally assigned to the country into which the security was issued, which results in larger effects for countries where U.S. firms commonly issue debt internationally, including Belgium, Luxembourg, and the United Kingdom.

Second, data on U.S. securities issued into foreign markets and not reported in the SHL were collected by the Board of Governors of the Federal Reserve System (Federal Reserve Board) based on news reports and commercial data sources. Issuance of these bonds, also known as Eurobonds, has been quite strong in recent years, and in principle should be reported in the SHL by the issuers. However, in non-benchmark survey years, the survey reporting panel is limited to respondents selected by the Federal Reserve Bank of New York. Many of the issuers are not already on the panels, and the process of bringing new reporters to the panel is fairly lengthy. Thus, for SHL 2014 through SHL 2022, adjustments to account for the most significant securities and issuers were constructed by the Board of Governors (see

column 4 in Exhibit 22). This adjustment increases the SHL data relative to the SLT. The increased holdings are assigned to “country unknown.”²⁵ As a result, the SHL position for debt held by “country unknown” is larger than that for the SLT (Exhibit 21). In addition, in some cases, review of the security-level data indicates that some foreign securities have been included in reporter submissions. These securities can be removed from the SHL data but cannot always be removed from the corresponding SLT filings.

Third, using TIC SLT data from reporters on the SLT panel but not on the annual survey panel, synthetic securities were created to adjust the data upward in order to make annual survey figures comparable to benchmark survey figures (see column 3 in Exhibit 22). The SLT data provided the aggregate market value by country of issuer and type of industry (government or other). To determine the distribution of securities holdings across other relevant characteristics not available from the SLT (maturity, currency, industry, and security type), data were used from reporters on the annual survey panel that were considered to be similar to reporters on the non-survey SLT panel. To reduce the number of adjustment securities created, synthetic securities were constructed only for countries whose total liabilities reporting from the sample of SLT filers not included in the annual survey exceeded \$250 million. Finally, additional synthetic securities account for the positions of 2019 benchmark respondents that did not meet the SLT threshold and will not be recorded again until the next benchmark. Total adjustment values are summarized in Exhibit 22. This synthetic securities adjustment applies to all asset types and generally brings the survey data values closer to those of the SLT. Overall, though, synthetic securities were small compared to total reported securities holdings.

Treatment of Repurchase and Securities Lending Agreements

Repurchase and securities lending agreements pose challenges for accurately measuring cross-border holdings of securities. Following international standards, repurchase and securities lending agreements are treated as collateralized loans, as the return of the same or similar securities at a set price is agreed upon in advance, and thus the economic risk of changes in the value of the securities continues to reside with the securities lender (the economic owner) even though the lender is no longer the legal owner (the securities borrower is the legal owner). Lenders (or their custodians) are instructed to report securities involved in such agreements as continuously held by the lender, and borrowers (or their custodians) are instructed not to report them as holdings of the borrower.

However, reporting entities may not always have sufficient information to report as survey forms request. That is, custodians may not always be able to distinguish (a) securities

²⁵ Most securities in the SHL that are assigned to “country unknown” are the result of this Eurobond data adjustment.

transferred in or transferred out through repurchase and lending activity from (b) those originating from outright purchases and sales. Thus, correct reporting by custodians, given the information they have, can result in reporting “errors” from the viewpoint of data collectors and those compiling balance of payments and international investment position statistics. This type of reporting error could result in measured foreign holdings being either over- or under-reported. For instance, under-reporting might occur if a foreign entity (or its agent) lends a U.S. security to a U.S. resident without either counterparty informing their custodian that the transaction is a loan rather than a sale. After the change in legal ownership, the U.S. custodian of the foreign resident delivers out the security and thus would not report the security as foreign held. The custodian for the U.S. resident would also not report, because it holds a U.S. security on behalf of a U.S. resident and not a foreign resident. On the other hand, over-reporting might occur if a U.S. resident lends a U.S. security to a foreign entity and again neither custodian is informed that the transaction is a loan rather than a sale. In this case, the U.S. custodian for the foreign resident would report foreign ownership of the U.S. security when in fact it is still U.S.-owned (in the sense of economic ownership).

Another challenge is that a security borrower (the legal owner) has the right to resell a borrowed security. If a U.S. resident borrows a U.S. security from a foreign entity and subsequently sells the security to another foreign resident, the result can be that two different foreign residents report the same holding. In this case, reporting is correct according to the instructions, but it can lead to the overstatement of certain statistics, such as the percentage of U.S. Treasury securities that is foreign owned.

Finally, securities lending and short sales can introduce a difference between reported securities transactions and changes in reported positions. For example, if a foreigner borrows a Treasury security from a U.S. resident and then sells the security to a U.S. resident, the transaction reporting system will (correctly) register this transaction as a foreign sale to a U.S. resident. However, the position reporting system will show no net change in foreign holdings of U.S. Treasuries. Thus, there will be a difference between reported net transactions and the change in reported positions, even after adjusting for valuation changes.

Data compilers, including those for the TIC system, have considered a wide range of approaches to mitigating this problem. For example, the International Monetary Fund has suggested that if a security borrower sells the security acquired under a security loan, then a negative (or “short”) position be recorded in the security, reflecting the obligation to return the security to the security lender. However, this approach would likely require expanding the TIC reporting panel to a very large set of security borrowers in order to capture all relevant activity. Another suggestion would be for the TIC system to deviate from the

international reporting standard to exclude repurchase agreements (repos) and securities lending based on economic ownership, and instead require reporting based on legal ownership. However, such a deviation from international reporting standards is not being considered at this time.

Acknowledgements

The Department of the Treasury, the Federal Reserve Bank of New York, and the Federal Reserve Board wish to express their appreciation to the International and Domestic Markets Division of the Federal Reserve Bank of New York for preparation of the U.S. portfolio investment data. Staff members responsible for the data analysis were Kenneth Aberbach and, under the direction of Jamie Ferkov: Gabriella Cruz, Hilda Hyman, Samuel Moser, Tiffany Romain, Mahesh Sangisetty, Vincent Simpson, and Sindhuja Vaidhyanathan. Under the direction of Ani Qosja and Nathan Merrill, automation staff in conjunction with the business area responsible for obtaining properly formatted data files and for facilitating data loads and updates were: Savaughn Cannady, Amador Castelo, Kin Chan, Lewis Diep, Maham Hamdani, Paula Webster, and Chun Wong. Under the direction of Muhammad Arshad, Application Development staff responsible for the application support were: Subramanyam Chamarti, Irina Levin, Aswin Subramaniam, Nowshad Mohamed, Natalie Michaels and Sukumar Palani. Staff members involved from TSG Quality management office were Subramanyam Chamarti and Sowmya Damera. Under the direction of Victoria Williams, staff responsible for timely data entry were: Rita Cek-Dagostin, Natasha Fair, and Sharon Trowers. Federal Reserve Board staff responsible for additional data analysis and review and the final production and drafting of this report were Ruth Judson, Andrew McCallum, Nyssa Kim, Andrew Loucky, Madeleine Yi, Laura DeMane, Ben Stagoff-Belfort, Christopher Cottle, and Jialin Zhang.

Chapter 3: Background of TIC Surveys and the TIC Reporting System

History of the TIC Liabilities Surveys

From 1974 to 2000, benchmark surveys, covering all significant securities holders, of foreign portfolio investment in U.S. long-term securities were conducted approximately every five years.²⁶ Beginning in 2002, benchmark surveys have been conducted every five years as of the end of June, and annual surveys, covering a smaller set of respondents, have been conducted as of the end of June in every non-benchmark year. In addition, surveys beginning in 2002 measure foreign holdings of U.S. short-term securities as well as those of long-term securities.²⁷ TIC form SHL is used for benchmark surveys and TIC form SHL-A is used for annual surveys.²⁸

In the four years following each benchmark survey, the annual surveys collect data primarily from the largest reporters, who collectively report at least 95 percent of the market value of foreign holdings as measured by the preceding benchmark survey. Results in each report use sampling weights to ensure conclusions based on the annual incomplete set of reporters, and results are adjusted to account for unmeasured holdings. Since 2013, the annual survey respondent panel has been adjusted each year based on reporting from the TIC monthly SLT form “Aggregate Holdings of Long-Term Securities by U.S. and Foreign Residents.” The June 2019 survey was a benchmark survey; the next full benchmark survey is planned for June 2024. The adjustment calculations and the reporting panel construction are discussed in Chapter 2.

The TIC Reporting System

The TIC liabilities surveys are part of the U.S. system to measure banking and securities positions and flows between the United States and the rest of the world, known as the Treasury International Capital (TIC) reporting system. This data system is based on location, or country of legal residence of the issuer, holder, buyer, or seller.

In addition to surveys of foreign ownership of U.S. securities conducted annually as of the end of June, the TIC system also conducts annual surveys of U.S. holdings of foreign

²⁶ Prior to 1974, surveys were conducted in 1853, 1869, and 1941 by the Department of the Treasury, and in 1934 and 1937 by the Department of Commerce. Those surveys, collected from a comprehensive panel of reporters, measured foreign holdings only of long-term U.S. securities.

²⁷ Long-term securities are defined as those without a stated maturity date (such as equities) or with an original term-to-maturity greater than one year.

²⁸ SHL stands for “Securities Holdings: Liabilities.” The SHL form is used for surveys and the SHL-A form is used for annual surveys.

securities as of the end of December, known as the TIC claims surveys, using TIC form SHC or SHC-A.²⁹

The TIC system also collects aggregate monthly data on cross-border securities holdings and transactions by counterparty country, type of foreign counterparty, and broad security type through the revised and expanded TIC Form SLT, “Aggregate Holdings, Purchases and Sales, and Fair Value Changes of Long-Term Securities by U.S. and Foreign Residents.” The TIC SLT has reported data on U.S. holdings of foreign long-term securities and foreign holdings of U.S. long-term securities since late 2011. Beginning in April 2023, the TIC SLT also began reporting data on cross-border purchases and sales of these securities. Later, data quality permitting, the TIC SLT may also report changes in valuation in long-term securities arising from changes in prices. These data are less detailed than annual survey data but allow for more frequent and timely analysis.

The TIC Form S, “Purchases and Sales of Long-Term Securities by Foreign Residents,” collected monthly data on U.S. residents’ cross-border transactions in long-term securities until February 2023, after transaction reporting was added to the TIC form SLT, as noted above. TIC S data were used in this and past TIC surveys reports.

The 2022 TIC liabilities survey was conducted under the authority of the International Investment and Trade in Services Survey Act (22 U.S.C. 3101 et seq.). Reporting was mandatory, and subject to penalties for noncompliance. Data were reported to the Federal Reserve Bank of New York, acting as agent for the Department of the Treasury, no later than August 31, 2022. The reporting forms and instructions are included in Appendix C.

Reporting Basis: Country of Residence

TIC data are reported based on the counterparty’s country of legal residence. In the case of the SHL, the country of holder is recorded based on the residence of the security owner. These country breakdowns should be interpreted with care for three reasons. First, beneficial ownership information is not necessarily reported in the TIC SHL for unregistered and bearer securities.³⁰ The owners of such securities do not need to make themselves known, and typically, little or no information is available about the owners. Second, many registered U.S. securities are issued abroad, and these securities typically trade in book-entry form, with settlement and custody occurring at international central securities depositories (ICSDs). Prominent ICSDs are Euroclear in Belgium and Clearstream in Luxembourg. U.S.

²⁹ SHC stands for “Securities Holdings: Claims.” The SHC form is used for surveys and the SHC-A form is used for annual surveys.

³⁰ Long-term bearer securities cannot be issued in the United States, but U.S. firms can and do issue such securities abroad.

survey reporters typically report only the country where the ICSD is located and thus large foreign holdings are attributed to these countries. Third, chains of foreign financial intermediaries are often involved in the custody or management of securities. This “custodial bias” tends to overstate the amounts of holdings by residents of countries with major custodial activities such as Belgium, Luxembourg, Switzerland, and the United Kingdom.³¹ Finally, the country of residence basis also defines whether a security is a U.S. security, depending on the residence of the issuer. For example, some bonds included as U.S. corporate bonds are issued by the U.S. financing affiliates of foreign multinationals.

Uses of TIC Data in U.S. Official Statistics

The TIC liabilities survey, along the TIC claims survey and other elements of the TIC securities reporting system, are the primary inputs to two U.S. publications. First, and in accordance with the purpose cited in the legislation mandating the TIC data collection, the TIC data underlie the cross-border securities portions of the Department of Commerce’s International Investment Position (IIP) and Balance of Payments (BOP) Statistics. Second, the TIC data are the basis for many items in the Rest of the World Tables in the Federal Reserve’s Statistical Release Z.1, “Financial Accounts of the United States.”

Online Links to TIC Data

All published TIC data, including monthly and quarterly data releases, annual survey reports, background articles, supplementary data, and reference materials, are available at the Treasury’s [Treasury International Capital \(TIC\) System website](#). Annual liabilities survey reports, including this and prior reports and all appendices are available at [TIC Annual Liabilities Reports](#). Data by country and broad security type for all survey years since 1994 are available at [Historical TIC annual liabilities data](#). Reporting instructions for the TIC liabilities surveys (SHL/SHL-A), which provide details of the residency-based reporting criteria used in the survey, are in Appendix C of this report and at [TIC SHL/SHLA Forms and Instructions](#). Detailed information about the monthly transactions system and the annual surveys, as well as a discussion of the SLT form, can be found in three articles posted on the TIC website: [Articles on the Treasury International Capital System \(TIC\)](#).^{32,33}

³¹ For example, a resident of Germany may buy a U.S. security and place it in the custody of a Swiss bank. Normally the Swiss bank will then employ a U.S.-resident custodian bank to act as its sub-custodian to hold the security to facilitate settlement and custody operations in the United States. When portfolio surveys are conducted, information is collected only from U.S.-resident entities. Thus, the U.S.-resident bank, acting as the sub-custodian of the Swiss bank, will report this security on the survey. Because the U.S. bank will typically know only that it is holding the security on behalf of a Swiss bank, it will report the security as Swiss-held.

¹ Stands for North American Industry Classification System.

² The government industry includes primarily U.S. Treasuries and also some bonds issued by state and local governments. When state and local bonds are clearly associated with a particular industry, such as utilities or education, they are classified by that industry. Debt issued by international and regional organizations is classified as private.

Table A12. Maturity Structure of Foreign-Held U.S. Long-Term Debt, as of June 30, 2022

Millions of dollars, parts may not sum to total as some bonds have unknown maturities.

1. Equities include common and preferred stock; all types of investment company shares, such as open-end funds, closed-end funds, money market mutual funds, and hedge funds; interests in limited partnerships and other equity interests that may not involve stocks or shares.
2. Agencies include U.S. government agencies and corporations as well as federally sponsored enterprises, such as the Federal National Mortgage Association.
3. Corporate debt includes all other non-Treasury and non-agency debt, such as certificates of deposit with a maturity of over one year, and U.S. municipal debt securities.

Note: In this and subsequent tables, components may not sum to totals due to rounding.

1. Because surveys of foreign holdings of U.S. long-term securities were collected on different dates from the surveys of U.S. holdings of foreign securities, estimated positions are shown for the between-survey values of foreign holdings. These estimates are subject to revision.
2. Net foreign holdings are defined as U.S. holdings of foreign securities minus foreign holdings of U.S. securities.

1. INTRODUCTION

A. PURPOSE

The Department of the Treasury, with the assistance of the Board of Governors of the Federal Reserve System and the Federal Reserve Bank of New York (FRBNY), is conducting a mandatory annual survey of holdings of U.S. securities, including selected money markets instruments, by foreign residents as of June 30, 2020. The data will be collected by the FRBNY, acting as fiscal agent for the Department of the Treasury. The data collected will be used by the U.S. Government in the computation of the U.S. balance of payments accounts, the U.S. international investment position, and in the formulation of international economic and financial policies. These data also will be used to provide aggregate information to the public on these foreign portfolio investments and to meet international reporting commitments.

In order to reduce reporting burden and costs to the government, there will be a substantial reduction in the number of reporters in four out of every five years. A benchmark survey Report of Foreign Holdings of U.S. Securities, Including Selected Money Market Instruments (Form SHL) of all significant U.S.-resident custodians and issuers will continue to be held approximately every five years. In non-benchmark years, the Annual Report of Foreign Holdings of U.S. Securities, Including Selected Money Market Instruments (Form SHLA) will require reports from only the largest U.S.-resident custodians and issuers. The data reported under these annual surveys (Form SHLA) will be used in conjunction with the results of the previous benchmark survey to compute estimates for the non-benchmark years. The next full Benchmark survey will be as of June 28, 2024.

The determination of who must report on the annual reports (Form SHLA) will be based upon the data submitted during the previous Benchmark survey and Aggregate Holdings of Long-Term Securities by U.S. and Foreign Residents (TIC SLT) report as of December of the preceding year. Designated U.S.-resident custodians and issuers will be required to file detailed security data on Schedule 2, in the same manner as they did on the June 30, 2019 benchmark survey.

B. AUTHORITY

This mandatory survey is conducted under the authority of the International Investment and Trade in Services Survey Act (22 U.S.C. 3101 et seq., [the Act]) and Executive Order 11961 of January 19, 1977. The Act specifies that the President has the authority to conduct a regular data collection program, including such studies and reports as may be necessary and feasible, to secure current information on international investment, including (but not limited to) such information as may be necessary for computing and analyzing the balance of payments accounts and the international investment position of the United States (22 U.S.C. 3103). In Executive Order 11961 §2, the President designated the Secretary of the Treasury to be responsible for collecting data on portfolio investment required by the Act.

C. CONFIDENTIALITY OF DATA REPORTED

The information collected by this survey may be used only for analytical and statistical purposes and to enforce the Act. Access to the information is available only to officials and employees (including consultants and contractors and their employees) designated to perform functions under the Act. Persons having access to individual company information submitted pursuant to the Act are subject to penalties for unauthorized disclosure (22 U.S.C. §3104 and 18 U.S.C. §1905). The results of this survey will be made available to the general public at an aggregated level so that neither the U.S. persons or organizations providing information nor individual or organizational ownership of U.S. securities can be identified.

D. PENALTIES FOR FAILURE TO REPORT

Reporting as directed in this package is mandatory for any U.S.-resident person or entity subject to the reporting requirements set forth in the report instructions. Failure by an entity to provide timely and accurate data can result in a civil penalty of not less than \$2,500 and not more than \$25,000, or injunctive relief ordering such person to comply, or both (22 U.S.C. §3105 (a) and (b)).

Willfully failing to submit any required information under the Act can result in a fine of not more than \$10,000; and, if an individual, may result in imprisonment for not more than a year, or both. Any officer, director, employee or agent who knowingly participates in such violation, upon conviction, may be punished by a like fine, imprisonment, or both (22 U.S.C. §3105(c)).

E. PAPERWORK REDUCTION ACT NOTICE

This report titled “Foreign Holdings of U.S. Securities, Including Selected Money Market Instruments” in the Federal Register Notice and has been reviewed and approved by the Office of Management and Budget in accordance with the Paperwork Reduction Act of 1995 and assigned OMB Control Number 1505-0123. The purpose is to collect accurate and complete data that will enable the Treasury Department to fulfill its responsibility under the Act. While the burden will vary widely from respondent to respondent, the estimated average burden associated with this collection of information is 486 hours per report for each U.S.-resident custodian reporting detailed information on Schedule 2, and 110 hours per report for each U.S.-resident issuer of U.S. securities providing detailed information on Schedule 2. The amount of time required to complete the report will vary depending on the amount of data to report. Comments concerning the accuracy of these burden estimates and suggestions for reducing the reporting burden should be directed to:

Administrator, International Portfolio Investment Data Systems
U.S. Department of the Treasury
1500 Pennsylvania Avenue NW, Room 5422MT
Washington, DC 20220, or

The Office of Management and Budget
Paperwork Reduction Project (1505-0123)
Washington, DC 20503

No person is required to respond to any U.S. Government collection of information unless it displays a currently valid OMB control number.

II. GENERAL INSTRUCTIONS

A. WHO MUST REPORT

All U.S.-resident entities that have been contacted by the Federal Reserve Bank of New York must report, regardless of the size of their consolidated holdings. All other entities are exempt from reporting.

Types of reporting entities include U.S.-resident custodians (including U.S.-resident central securities depositories) and U.S.-resident issuers. Entities that provide multiple services (i.e., provide custodial services and issue securities) should report securities that meet the reporting criteria for each role and ensure that securities are not double counted.

- **U.S.-resident custodians, including brokers and dealers**, must report all U.S. securities they hold in custody (or manage the safekeeping of) for the account of foreign residents (including their own foreign branches, subsidiaries, and affiliates). These securities must be reported by the U.S.-resident custodian even if the securities are in turn held at DTC, Euroclear, or another central securities depository, since the central securities depository knows only that it is holding securities on behalf of the U.S.-resident custodian, whereas the U.S.-resident custodian knows that it is holding these securities on behalf of a foreign resident. However, if a U.S.-resident custodian uses a U.S.-resident sub-custodian, the custodian should report if (and only if), it does not maintain separate accounts at and disclose the clients to the sub-custodian. (If the custodian does maintain separate accounts at and disclose the clients to the sub-custodian, it should not report, to prevent double counting.)
- **U.S.-resident central securities depositories**, must report all U.S. securities they hold in custody (or manage the safekeeping of) directly on behalf of foreign residents with which they have established direct relationships, including foreign-resident brokers, dealers, exchanges, and central securities depositories.
- **U.S.-resident issuers**, must report all securities issued by U.S.-resident units, which are:
 1. Owned by foreign residents for which neither a U.S.-resident custodian nor a U.S.-resident central securities depository is used. Transfer or paying agents should be able to provide the U.S.-resident issuer with this information;
 2. In book entry form that are held at a foreign-resident central securities depository; or
 3. Bearer securities.

Please refer to Section III, What Securities Must Be Reported, to identify reportable U.S. securities.

B. CONSOLIDATION RULES

U.S.-resident organizations, including bank holding companies (BHC), financial holding companies (FHC), and intermediate holding companies (IHC) should include all reportable securities for all U.S.-resident parts of their organization, including all U.S.-resident branches and subsidiaries. U.S. residents include entities located in the Commonwealth of Puerto Rico and the U.S. territories. Please see Appendix F for the complete definition of United States. It is the responsibility of the U.S. parent entity in each organization to ensure that its report includes all applicable entities within its organization.

Securities issued by U.S.-resident trusts and special purpose entities (SPEs) for which the reporter is the trustee or primary beneficiary should be included. Shares of U.S.-resident funds that are managed by the reporting entity should be included unless a U.S.-resident custodian other than the reporting entity is used.

U.S. branches and agencies of a foreign bank located in the same state and within the same Federal Reserve District should submit a consolidated report for these offices. U.S. branches and agencies of a foreign bank that are located in either different states or different Federal Reserve Districts, should submit separate reports.

C. REPORTING DATES

Report data as of the last business day of June. All data should be submitted to the Federal Reserve Bank of New York no later than the last business day of August.

D. SUBMISSION INSTRUCTIONS AND CONTACT INFORMATION

If your organization is submitting 100 or more Schedule 2 records, the Schedule 2 data must be submitted electronically.

Federal Reserve Reporting Central System:

- Submit the SHL(A) report using the Federal Reserve Reporting Central System. The Reporting Central System is fast, easy to use, and secure. You can submit reports quickly and easily either using online data entry or via XML file transfer. Reporting Central provides a confirmation of data receipt at the Federal Reserve Bank and checks the validity of your submission. Reporting Central saves time and delivery costs, avoids possible mail delays, and eliminates paper and fax transmissions.

- For more information on how to submit data using the Reporting Central system, log on to <https://www.frb services.org/centralbank/reportingcentral/index.html>, or contact the SHL staff at 212-720-6300 or at SHLA.Help@ny.frb.org. An application to register for Reporting Central can be obtained at: https://www.frb services.org/centralbank/reportingcentral/application_setup.html

Completed applications should be sent to:

Federal Reserve Bank of New York
Data and Statistics Function, 6th Floor
33 Liberty Street
New York, NY 10045-0001
or faxed to (212) 720-2598

Alternative Methods of Reporting:

- If your organization is submitting less than 100 Schedule 2 records, these records may be submitted using Reporting Central or on paper, using the form contained in Appendix A. Data may also be reported on computer printouts in the same format as the printed reports. Schedule 1 must be submitted in the same package as the Schedule 2 data.

Please contact FRBNY staff with questions pertaining to the report or if any of the following conditions apply:

1. Your entity requires additional time to complete your report.
2. Your entity received a copy of the report booklet and is not the U.S. parent entity in your organization.
3. Your entity cannot submit a single report for its entire organization.
4. Your reporter contact information or technical contact information changes after you submit your Schedule 1 report.

Reports can be mailed or sent by courier to:

Federal Reserve Bank of New York
Data and Statistics Function, 6th Floor
33 Liberty Street
New York, NY 10045-0001

FRBNY staff can be reached at:

Phone: 212-720-6300 or 646-720-6300

Email: SHLA.Help@ny.frb.org

Additional copies of the reporting forms and instructions may be printed from the Internet at:

<https://www.treasury.gov/resource-center/data-chart-center/tic/Pages/forms-sh.aspx#shl>

III. WHAT SECURITIES MUST BE REPORTED

This report collects information on securities issued by U.S.-residents that are owned by foreign residents, including U.S. equities (including shares in funds), U.S. short-term debt securities (including selected money market instruments), U.S. long-term debt securities, and U.S. asset-backed debt securities.

Reportable securities may be traded or issued in the United States or in foreign countries, and may be denominated in any currency. Neither the country in which the securities are traded or issued, nor the currency in which the securities are denominated, is relevant in determining whether the securities are reportable. Securities held as part of a direct investment relationship should not be reported. (See Section III.I.)

A. FOREIGN-RESIDENT OWNERSHIP

Securities are considered to be foreign owned if, according to the reporter's records; the holder of record is not a resident of the United States. In addition, all outstanding bearer bonds should be assumed to be owned by foreign residents and reported by the U.S.-resident issuer. Bearer bonds should also be reported by U.S.-resident custodians, but only if the reporter's records indicate a foreign-resident owner (or foreign-resident custodian).

The following are considered to be foreign residents:

- Residents of foreign countries, including foreign-resident custodians and foreign-resident central securities depositories. (These include residents of Canada, Mexico, and offshore centers.)
- International organizations with extra-territorial status (even if located in the United States), such as the International Bank for Reconstruction and Development (World Bank), the International Monetary Fund (IMF) and the Inter-American Development Bank.¹ (See Appendix C for a complete list of these organizations. Most are in the regional group codes: 72907, 73903, 74918, 74942, 75906, 76902, and 77909.)
- Foreign subsidiaries of U.S. entities and foreign-resident branches of U.S. banks.
- Offshore and other non-U.S. funds.
- Entities or individuals that file an IRS Form W-8, indicating that they are foreign residents. Please note that there may be exceptions (such as Puerto Rico). However, if an IRS Form is not available, the mailing address can be used to determine residency.

¹ Pension plans of international and regional organizations, if located in the United States, are U.S.-resident entities; therefore, any securities owned by these pension plans should be excluded from this report.

B. REPORTABLE U.S. SECURITIES

U.S. securities are securities issued by U.S.-resident entities, with the exception of Depositary Receipts (DRs) that are backed by foreign securities and securities issued by international organizations that have extra-territorial status, such as the World Bank and the Inter-American Development Bank. U.S. securities can be issued in any country, denominated in any currency, and traded on any exchange.

U.S.-resident entities include U.S.-resident branches of foreign banks and U.S.-resident subsidiaries of foreign companies. Securities issued by foreign branches or subsidiaries of U.S. entities are not U.S. securities unless, due to merger, reorganization, or default, a U.S.-resident entity assumes direct responsibility for the payment of a previously issued foreign security.

Reportable securities include:

Equity Securities

- Common stock
- Preferred stock (participating and nonparticipating preference shares)
- Restricted stock
- U.S.-resident fund shares (open-end and closed-end), REITS, money market mutual funds, index-linked equity securities including unit investment trusts (including SPDRs, DIAMONDS, etc.)
- All other equity, including shares or units of ownership in unincorporated business enterprises, such as limited partnerships

Debt Securities

- Debt, registered and bearer, including bonds and notes (unstripped and stripped) and bonds with multiple call options
- Convertible debt and debt with attached warrants
- Zero-coupon debt and discount notes
- Index-linked debt securities (e.g., property index certificates)
- Commercial paper (including asset-backed commercial paper)
- Bankers' acceptances and trade acceptances
- Negotiable certificates of deposit, bank notes, and deposit notes
- Notes, including those issued under note issuance facilities and revolving underwriting facilities medium-term notes, promissory notes, deep-discounted, currency-linked (e.g., dual-currency), floating rate notes (FRN), such as perpetual notes (PRN), variable rate notes (VRN), structured FRN, reverse FRN, collared

FRN, step up recovery FR (SURF), and range/corridor/accrual notes

- Asset-backed securities (see Section III.D)
- All other long-term and short-term debt securities

(Note: U.S. debt securities that are still outstanding as of June 30 should be reported even if the maturity date has passed.)

C. DO NOT REPORT

Do not report any:

- Derivative contracts (including futures, forwards, swaps, options and warrants) meeting the definition of a derivative under ASC 815 (formerly FAS 133). Embedded derivatives that are not bifurcated under ASC 815 should be included in the value of the host contract. However, if an embedded derivative is bifurcated the derivative should be excluded from the report.
- Securities which have been temporarily received as collateral under resale agreements or similar financing agreements (see Section III.F)
- Loans and loan participation certificates
- Letters of credit
- Non-negotiable certificates of deposit
- Bank deposits, including time (except for negotiable CDs) and demand deposits
- Annuities, including variable rate annuities
- Foreign securities, including:
 1. Depositary receipts (DRs) backed by foreign securities, including ADRs (American Depositary Receipts), ADSs (American Depositary Shares), GDRs (Global Depositary Receipts), and IDRs (International Depositary Receipts).
 2. Securities issued by international and regional organizations with extra-territorial status, such as the International Bank for Reconstruction and Development (IBRD or World Bank) or the Inter-American Development Bank (IDB). (See Appendix C for a list of these organizations.)
 3. Securities issued in the United States by foreign-resident entities (e.g., Canadian or Mexican entities), even if they are denominated in U.S. dollars and traded on U.S. securities exchanges.
 4. Securities issued by foreign subsidiaries of U.S. entities (e.g., GMAC Canada) or foreign branches of U.S. banks, even if they are guaranteed by the U.S. parent company, or issued in the United States.
 5. Securities issued by foreign-resident entities under Section 144A of the SEC Act.
 6. Securities issued by corporations that were incorporated outside of the United States by the report

as of date, including companies incorporated offshore in countries such as the Cayman Islands and Bermuda.

D. ASSET-BACKED SECURITIES

Asset-backed securities (ABS) are securitized interests in a pool of assets, which give the purchaser a claim against the cash flows generated by the underlying assets. Securities backed by revolving credits, such as pools of credit card receivables, are reported as ABS if the return to the owner is based upon these credits, (i.e., the credits do not merely serve as collateral). Foreign-owned ABS should be reported if the issuer securitizing the assets is a U.S. resident. The underlying asset should not be used to determine if the ABS are reportable.

Include as ABS all collateralized mortgage obligations (CMOs), collateralized bond obligations (CBOs), collateralized loan obligations (CLOs), collateralized debt obligations (CDOs), and other securities backed by pools of:

- mortgages;
- credit card receivables;
- automobile loans;
- consumer and personal loans;
- commercial and industrial loans and other whole loans; and
- other assets.

E. FUNDS AND RELATED EQUITY OWNERSHIP

Report foreign-residents' ownership of shares/units of funds and investment trusts legally established in the United States (U.S.-resident funds) as equity securities. All foreign-residents' ownership of U.S.-resident fund shares should be assigned security type = 3 (fund shares), and not categorized as a debt security, regardless of the types of securities held by the fund.

For purposes of this report, funds include all investment vehicles that pool investors' money and invest the pooled money in one or more of a variety of assets. Funds include, but are not limited to:

- mutual funds (including both open-end and closed-end mutual funds);
- money market funds;
- investment trusts;
- index-linked funds;
- exchange-traded funds (ETFs);

- hedge funds; and
- common trust funds.
- private funds

The determination of whether a fund's shares are a U.S. security is based on the country in which the fund is legally established, not based on the residence of the issuers of the securities the fund purchases. For example, if a foreign resident owns shares in a fund organized in New York, these shares are reportable U.S. securities, whether or not the fund purchases foreign securities. Conversely, foreign-resident ownership of shares of "offshore" or other foreign-resident funds that purchase U.S. securities should not be reported.

Many funds established outside of the United States have names that are similar to U.S.-resident fund names. This often occurs when the fund is managed by a group that also manages many U.S.-resident funds and therefore may be thought of as managing only U.S.-resident funds. If there is doubt as to whether the investment should be classified as a fund or whether a fund is U.S. or foreign, please contact FRBNY staff at 212-720-6300 or 646-720- 6300.

Report the ownership of U.S. securities by foreign-resident funds. Although ownership of shares of foreign-resident funds are excluded from this report, any U.S. securities owned by foreign-resident funds for their portfolio are reportable. These are distinct investments and, therefore, are not duplicate reporting. U.S. securities owned by foreign-resident funds should be classified as either equity, debt, or asset-backed securities, as indicated in Section III.B.

Reporting guidelines for Hedge Funds and other alternative investments

Investment advisors, managers, administrators or similar types of legal entities that create master and feeder funds both outside and inside the U.S. should report as follows:

- Investments between the U.S. and foreigner entities (affiliates) of a hedge fund that the investment manager establishes and the investments the manager makes in these entities, are portfolio investment and should be reported on this report as long as they meet the criteria for the direct investment exception for private funds described below.

Example 1

A U.S. investment manager creates a hedge fund comprised of a U.S. Master Fund, a Cayman Feeder Fund, and a U.S Feeder Fund. The investment that the foreign feeder fund has in the master fund is portfolio investment and should be reported in the TIC system. Purchase and sales of the master fund shares by the

foreign feeder fund should be reported on the TIC S by the U.S. based master fund and the master fund should report the ownership of their “shares” by the foreign feeder funds as issuer of the “domestic security” on the SHL(A) report. If a U.S. custodian is involved in the holding the “domestic security” then the reporting responsibility would be on the U.S. custodian to report on the SHL(A).

Example 2

A foreign hedge fund creates a U.S. based Master Fund, a Cayman Feeder Fund, and a U.S. Feeder Fund. The investment that the foreign feeder fund has in the master fund is portfolio investment and should be reported in the TIC system. Purchase and sales of the master fund shares by the foreign feeder fund should be reported on the TIC S by the U.S. based master fund and the master fund should also report the ownership of their “shares” by the foreign feeder funds as issuer of the “domestic security” on the SHL(A) report. If a U.S. custodian is involved in the holding of the “domestic security” then the reporting responsibility would be on the U.S. custodian to report on the SHL(A).

Direct investment exception for private funds (see Direct Investment in the glossary)

While investments in U.S. entities of 10 percent or more of their voting interest by a foreign entity are typically excluded from TIC reports, investments in private funds, or between the entities of a private fund, are included in TIC surveys regardless of ownership share if they meet BOTH of the following criteria:

- The private fund does not own, directly or indirectly through another business enterprise, an “operating company” – i.e., a business enterprise that is not a private fund or a holding company— in which the foreign parent owns at least 10 percent of the voting interest,

AND

- If the private fund is owned indirectly (through one or more other U.S. business enterprises), there are no “operating companies” between the foreign parent and the indirectly-owned private fund.

Note: The descriptions of the various examples are based on common master/feeder fund structures. It is possible for there to be different types of structures when creating these funds and they may be called different names by some entities. Ultimately, if the entity 1) has less than 10% voting interest, 2) non-voting interest in the U.S. private fund, or 3) meets the criteria above regarding “operating companies”, it is not a direct investment and will fall into the category of portfolio investment and needs to be reported as part of the TIC system.

F. SECURITIES INVOLVED IN REPURCHASE AND SECURITIES LENDING ARRANGEMENTS

A repurchase agreement (repo) is an arrangement involving the sale of securities at a specified price with a commitment to repurchase the same or similar securities at a specified price on a future date. A reverse repo is an agreement whereby

a security is purchased at a specified price with a commitment to resell the same or similar securities at a specified price on a specified future date. Securities lending/borrowing arrangements are agreements whereby the ownership of a security is transferred in return for collateral, usually another security or cash, under condition that the security or similar security will revert to its original owner at a future date.

Securities "sold" by foreign residents under repurchase agreements or buy/sell back agreements, lent under securities lending arrangements, or delivered out as collateral as part of a reverse repurchase agreement or security borrowing agreement should be reported as if the securities were continuously held by the foreign resident. That is, the security lender's U.S. custodian should report the U.S. security as if no repurchase agreement or buy/sell back agreement occurred.

Securities temporarily acquired by foreign residents as collateral under reverse repurchase agreements, securities lending or borrowing arrangements, or buy/sell back agreements should NOT be reported. That is, the security borrower's U.S. custodian should exclude the U.S. security as if no resale agreement or buy/sell back agreement occurred.

However, if cash was temporarily received as collateral and was used to purchase securities, those securities should be reported.

G. STRIPPED SECURITIES

Separate Trading of Registered Interest and Principal Securities (STRIPS) and other similar instruments are securities that have been transformed from a principal amount with periodic interest coupons into a series of zero- coupon securities, with the range of maturities matching the coupon payment dates and the redemption date of the principal amount.

The residency of the STRIPS and similar instruments is the residence of the entity that issued the stripped security. However, the type of issuer of STRIPS and similar instruments is based upon the type of issuer of the underlying security. For example, U.S. Treasury STRIPS should be classified as U.S. Treasury securities even though the Treasury does not issue or sell STRIPS directly to investors. In addition, all 'teddy bears' (TBRs), 'tigers' (TIGRs), 'cats' (CATS) and 'cougars' (COUGRs) should also be classified as U.S. Treasury securities. Holdings of TIPS and Floating Rate Notes should be reported at fair market value and should not include inflation accretion.

Foreign holdings of stripped securities where the underlying security is not an ABS, both the interest-only (IO) component and the principal-only (PO) component, should be reported as security type = 10 (bond or note, stripped).

Foreign holdings of stripped securities where the underlying security is an ABS, tranches of stripped ABS, any IO component, and any PO component, should be reported as security type = 12 (asset-backed security).

H. U.S. GOVERNMENT AGENCIES OR FEDERALLY SPONSORED ENTERPRISES

Securities that are issued by U.S. government agencies or federally sponsored enterprises and owned by foreign residents are reportable. In addition, foreign owned securities that are issued by a U.S.-resident entity and guaranteed by U.S. government agencies or federally sponsored enterprises are reportable. For purposes of Schedule 2, item 11 (type of issuer), all these securities should be coded as type 2 (agencies). For example, securities that are guaranteed by the Government National Mortgage Association (GNMA) or the Small Business Administration (SBA) should be reported as U.S. government agency securities.

I. DIRECT INVESTMENT

Please review the definition of Direct Investment in the TIC glossary and the list of excluded investments in these instructions (see sections III.C, III.E (direct investment exception), and III.K (Limited Partnerships)) to determine which investments are direct investments reportable to the Bureau of Economic Analysis of the Department of Commerce, and not reportable on the TIC SHL(A) and the TIC SLT reports. All holdings known to be direct investment should be excluded from TIC reports.

J. SECURITIES HELD BY U.S. CENTRAL SECURITIES DEPOSITORIES

U.S.-resident central securities depositories must report all U.S. securities they are holding in custody (or managing the safekeeping of) **directly** on behalf of foreign residents, such as foreign-resident brokers and dealers who may be members of the depository, or foreign-resident securities exchanges or depositories that have established direct relationships with the U.S.-resident central securities depository.

U.S.-resident custodians should report all U.S. securities that are shown on their records as being owned by foreign residents (or held in custody by its foreign-resident custodian) even if the safekeeping or settlement of the security is done at a U.S.-resident central securities depository.

K. LIMITED PARTNERSHIPS

Foreign-resident limited partner ownership interests in U.S.-resident limited partnerships should be reported as security type = 4 (All other equity). Limited partners' ownership interests do not carry voting rights; therefore, all ownership interests, even those greater than 10%, are reportable. The Number of Shares field on Schedule 2 (item 18) should be defaulted to the value reported in the US\$ Fair Value field (item 16) because limited partnerships do not issue shares.

General partner ownership interests may be considered to be direct investment, in which case such interests should be excluded from this report (see Section III.I for a more complete definition of direct investment.)

L. ACCOUNTING RULES, VALUATION OF SECURITIES, AND CALCULATION OF U.S. DOLLAR VALUES

Accounting Rules

All securities should be reported using settlement date accounting. Gross long positions should be reported. Do not net any short positions from long positions. Do not enter decimals or negative values in any cells.

Valuation of Securities

Report the fair value of securities as of close of business on the last business day of June. The fair value follows the definition under ASC 820 (formerly FAS 157). For coupon bonds, valuations should be based on “clean” prices, that is, excluding accrued interest.

U.S.-resident custodians should, at a minimum, report the fair value to the extent that it is available as part of the services provided to their customers, even if the price available is for a date prior to the last business day of June. If there is doubt as to whether to report the available fair value or to report a fair value of zero, please contact FRBNY report staff at 212-720-6300 or 646-720-6300.

For asset-backed securities (ABS), the value of the unpaid principal amount outstanding at close of business on the last business day of June should be reported; if principal has been repaid, this value will **not** be the same as the original face value, revalued at end-period market prices.

Foreign Currency Denominated Securities – CALCULATION OF U.S. DOLLAR VALUES

If the security is not denominated in U.S. dollars (US\$) and a U.S. dollar fair value is not available in your system, convert the foreign currency denominated fair value into US\$ using the spot exchange rate as of the close of business on the last business day of June. If you need assistance locating an exchange rate, please contact FRBNY staff at 212-720-6300 or 646-720-6300.

If the exchange rate is normally quoted in units of foreign currency per US\$, such as ¥105.75/US\$, divide foreign

currency values by the foreign exchange rate to obtain the US\$ values. For example, if the value of a U.S. security issued in Japan is ¥ 200,000, and the exchange rate is ¥105.75/US\$, divide ¥ 200,000 by 105.75 to obtain US\$ 1,891.

If the exchange rate is normally quoted in US\$ per units of the foreign currency, such as US\$1.75/UK£, multiply foreign currency values by the US\$ exchange rate value of the foreign currency to obtain the US\$ values. For example, if the value of a U.S. security issued in the United Kingdom is UK £1,000 and the exchange rate is US\$1.75/UK£, multiply UK £1,000 by 1.75 to obtain US\$ 1,750.

M. DATA RETENTION PERIOD

All data used to create this report must be retained by the reporter for a period of 36 months from the date of the report's submission.

N. REVIEW OF DATA AND REQUEST FOR REVISED DATA

Data submitted on the reporting schedules are reviewed by FRBNY staff. As a result of this review, the reporter may be asked by FRBNY staff to provide supplemental information, including reasons for significant data changes between reporting periods, or corrected data. In addition, FRBNY staff may request: (1) information to ensure that all reportable U.S. securities have been reported; (2) information to ensure that all reported U.S. securities are owned by foreign residents (or held by foreign-resident custodians or foreign-resident central securities depositories); or (3) other information that helps to explain or corroborate the submitted data.

Reporters filing data on electronic media that are not formatted per the specifications in Appendix G will be required to resubmit the data in the proper format.

Each quarter, FRBNY staff obtains a list of debt securities issued abroad by U.S. companies. Experience has shown that most such issues are largely or completely foreign held. FRBNY staff will compare this information with the reports submitted by U.S.-resident issuers of foreign placed debt securities to ensure that foreign-issued securities are being properly reported. FRBNY will ask the issuers of such securities for additional information in cases of apparent under- or over-reporting.

IV. LINE-BY-LINE INSTRUCTIONS FOR SCHEDULE 1- REPORTER CONTACT IDENTIFICATION AND SUMMARY OF FINANCIAL INFORMATION

A Schedule 1 must be completed by all entities that receive this report booklet. This schedule is used to provide basic identifying information and summaries of data reported on Schedule 2 records. Please type or print all information.

(Please enter your ten-digit Reporter Identification Number (RSSD) at the top of each page of Schedule 1.)

REPORTER CONTACT IDENTIFICATION AND SUMMARY OF FINANCIAL INFORMATION

1. **Reporter Identification Number (RSSD)** - Enter the ten-digit Reporter Identification Number that. If you do not know the Reporter Identification Number for your entity, please contact FRBNY staff at 212-720-6300 or 646-720-6300.
2. **Organization Name** - Enter the full legal name of the reporting entity.

For items 3 through 6, enter reporting entity's full mailing address.

7. **Reporting Status** - Select "1" only if your parent organization has received authorization to file an unconsolidated report but you are exempt (meaning you have no reportable securities in custody or have not issued any reportable securities). All other entities should select "2" and file the appropriate Schedule 2 records.
8. **Reporter Type** - Enter one of the following that best describes your organization (**Refer to Appendix F - Glossary** for specific definition of reporter type)

1 = Depository Institution	4 = Insurance Company	7 = Foundation, Trust, or Estate
2 = Fund/Fund Manager/Sponsor (excluding a pension fund)	5 = Other Financial Organization (including BHC,FHC, IHC, broker/dealers)	8 = Institution of Higher Learning (e.g., university)
3 = Pension Fund	6 = Non-Financial Organization	9 = Other (not listed above)

9. **Name of Contact** - Enter the name of the person who will be the primary contact for this report and can answer questions about the data reported.
10. For items 10 through 12, enter title, telephone number and email address of the contact identified in item 9.
13. **Name of Service Provider or Vendor Used** - If a service provider or vendor was used to prepare the data reported, enter the name of the service provider.

14. **Name of Technical Contact** - Enter the name of a person who will serve as a contact should any technical issues, such as incorrect file formats. If a service provider was used to prepare the data reported, the technical contact may be a vendor employee.
15. For items 15 through 17, enter title, telephone number and email address of the contact identified in item 14.
18. **Valuation Technique(s) Used to Determine Fair Value** - For each reporting unit, describe the valuation technique(s) used to calculate the reported fair values. If securities are automatically valued at zero after a specified time period of inactivity, please specify the time period and whether this applies to the security or to the client's holdings of the security. Also, please specify how securities not actively traded on the report date and those with internally generated security identification numbers are valued. If your organization has more than four reporting units, please attach additional copies of Schedule 1, page 2, with item 18 completed.

SUMMARY OF SCHEDULE 2 INFORMATION

This section contains summary data for the information reported on Schedule 2 records.

19. **Total Number of Schedule 2 Records Submitted** - Enter the total number of Schedule 2 records submitted.
20. **Total U.S. \$ Fair Value of All Equity Securities reported on Schedule 2 records** - Enter the sum of the U.S.\$ fair value of all equity security records (records with Schedule 2, Item 18 = security types 1, 2, 3, or 4), rounded to the nearest U.S. dollar.
21. **Total U.S. \$ Fair Value of All Short-Term Debt Securities (excluding asset-backed securities) reported on Schedule 2 records** - Enter the sum of the U.S. \$ fair value of all such security records (records with Schedule 2, Item 19 = security types 5, 6, 7, 8, 9, 10, or 11), rounded to the nearest U.S. dollar.
22. **Total U.S. \$ Fair Value of All Long-Term Debt Securities (excluding asset-backed securities) reported on Schedule 2 records** - Enter the sum of the U.S. \$ fair value of all such security records (records with Schedule 2, Item 19 = security types 5, 6, 7, 8, 9, 10, or 11), rounded to the nearest U.S. dollar.
23. **Total U.S. \$ Fair Value of All Asset-Backed Securities reported on Schedule 2 records** - Enter the sum of the U.S. \$ fair value of all such security records (records with Schedule 2, Item 20 = security type 12), rounded to the nearest U.S. dollar.

CERTIFICATION INFORMATION

This section must be completed by all reporters.

By signing and dating the certification, the Certifier acknowledges that:

- He/she has read and understood the reporting requirements of this report;
- He/she is aware that both civil and criminal penalties may be imposed for filing a false report; and
- He/she is sufficiently knowledgeable about the activities and functions of this entity that he/she can knowingly and with reasonable confidence certify that the information provided in this report is both accurate and complete.

For items 24 through 28. Sign and date the form. Enter the name, job title, telephone number, and email address of the person in your organization who certifies that the information provided is complete and accurate.

V. LINE-BY-LINE INSTRUCTIONS FOR SCHEDULE 2 - DETAILS OF SECURITIES

(Please enter your ten-digit Reporter Identification Number (RSSD) at the top of each page of Schedule 2.)

1. **Reporter Identification Number (RSSD)** - Enter the ten-digit Reporter Identification Number that is printed on the mailing label on the report booklet. If you do not know the Reporter Identification Number for your entity, please contact FRBNY staff at 212-720-6300 or 646-720-6300.
2. **Sequence Number** - Enter the sequence number of this record, right justified. The first record should be assigned sequence number 1 and each subsequent Schedule 2 record should be sequentially numbered.
3. **Reporting Unit Code** - If data being submitted are collected from multiple databases or reporting systems, please report an internal code that will enable you to identify the database or system from which the information on this Schedule 2 came. This information will greatly reduce the costs of identifying and fixing any reporting errors that may occur.
4. **Name of Reporting Unit** - Enter a description or name of the reporting unit or area that corresponds to the code reported in item 3.
5. **Reporting as** - Enter "1" for issuer if your entity issued this security (even if you are also acting as the custodian). Enter "2" if your entity did not issue this security.
6. **Security ID** - Enter the security ID code used to identify the security reported on this Schedule 2. CUSIP codes are strongly preferred. If the CUSIP is not available, please try to provide the ISIN, CINS, Common code or SEDOL. **Do not use internally generated codes unless this security has not been assigned a code by any recognized numbering agency (e.g., limited partnerships).** Records for securities for which a portion is restricted and a portion is not restricted should be reported with the numbering agency code assigned to the unrestricted portion. If excessive internal codes are used, we may have to contact your institution to help identify characteristics of certain individual securities. **Please include the security ID's check digit and exclude any internal coding characters added to the CUSIP or other numbering agency code.**
7. **Security ID System** - Select the appropriate number from the list shown on the form. For example, if the security ID number entered in Item 6 is a CUSIP number, enter "1"; if it is a CINS, enter "3." If the security ID system used is not listed, enter a code of "7" (Other) and provide the name of the organization generating the code in item 8.

8. **Comment Line** - If you entered a code of "7" (Other) in item 7 you must provide the name of the organization generating the security ID code.
9. **Security Description** - Briefly describe the security, providing any relevant descriptive information available. Ideally, this would include the type of security, the maturity date if debt or ABS, and: (a) for preferred stock the annual dividend; (b) for debt securities, the interest rate; (c) for floating rate notes, how the interest rate is calculated (e.g., Libor plus 1.5); and (d) for stripped securities the type of security/tranche. This information is particularly important for securities with an internally generated or other security ID not generated by a recognized numbering agency, (i.e., security ID system codes = 6 or 7).
10. **Name of Issuer** - Enter the name of the entity that issued the security. Please try to provide the full legal name of the issuer. For branches of banks, please provide the location of the branch.

11. Type of Issuer –

- Enter "1" if the security was issued by the United States government or Federal Financing Bank.
- Enter "2" if the security was issued or guaranteed by a federal agency (e.g., Government National Mortgage Association (GNMA)) or issued by or guaranteed by a federally sponsored enterprise (e.g., Federal National Mortgage Association (FNMA)). See Appendix H for a list of these entities.
- Enter "3" if the security was issued by a state or local government (e.g., New York State bonds).
- Enter "4" if the security was issued by a depository institution.
- Enter "5" if the security was issued by all other financial organizations (including BHC, FHC and IHC)
- Enter "6" if the security was issued by a nonfinancial organization.

12. **Security Type** - Enter the security type code from the list below that most closely describes the type of security being reported. (Refer to Appendix F - Glossary for specific definition of Security Type)

<u>Equity</u>	<u>Debt (excluding asset-backed securities)</u>	<u>Asset-backed securities</u>
1. Common stock	5. Commercial paper	9. Bond or note, unstripped
2. Preferred stock	6. Negotiable CD	10. Bond or note, stripped
3. Fund shares	7. Convertible debt security	11. All other debt
4. All other equity	8. Zero-coupon bond or note	12. Asset-backed security

Type 1 should be used to report all common stock, including restricted common shares.

Type 2 should be used to report all preferred stock, including participating preference shares, nonparticipating preference shares, convertible preferred stock, and restricted preferred shares.

Type 3 should be used to report all shares of funds, including funds that invest primarily or exclusively in money market instruments and in long-term debt, exchange traded funds, open-end and closed – end

mutual funds, and unit investment trusts. (See Section III.E)

Type 4 should be used to report all other types of equity, including foreign-resident limited partner ownership of U.S.-resident limited partnerships and any other form of equity not specified in security types 1, 2, and 3.

Type 5 should be used to report all commercial paper, including asset-backed commercial paper.

Type 6 should be used to report long-term and short-term negotiable certificates of deposits, including negotiable bank notes and negotiable deposit notes issued by U.S. institutions, including U.S. branches of U.S. or foreign banks. Non-negotiable certificates of deposit are not reportable.

Type 7 should be used to report all convertible debt securities, including convertible bonds and zero-coupon convertible debt. However, non-convertible debt securities with embedded warrants or options should be reported as either type 8 (if a zero-coupon bond or note) or type 9.

Type 8 should be used to report bonds and notes that do not provide interest payments, such as discount notes. However: (1) zero-coupon convertible debt should be reported as type 7; (2) stripped non-asset-backed securities, both the interest-only (IO) and principal-only (PO) components, should be reported as type 10; (3) U.S. Treasury bills should be reported as type 11; and (4) stripped asset-backed securities, the tranches, and the IO and PO components, should be reported as type 12.

Type 9 should be used to report bonds or notes that: (1) cannot be converted to equity securities, (2) provide interest payments, (3) have not been stripped (i.e., not an IO or PO), and (4) do not give the owner a claim against the cash flows generated by the underlying assets (i.e., ABS). These bonds and notes are commonly referred to as “straight debt.”

Type 10 should be used to report all components of stripped securities, including the IO and PO components. However, all tranches of stripped asset-backed securities should be reported as type 12.

Type 11 should include all debt other than asset-backed securities that is not covered in types 5-10, including U.S. Treasury bills, TBRs, TIGRs, CATS, and COUGRs.

Type 12 should include only short-term and long-term securities that represent securitized interests in a pool of assets and give the investor a claim against the cash flows generated by the underlying assets. All tranches of stripped asset-backed securities, as well as unstripped asset-backed securities, should be reported as type 12. Debt which is collateralized by assets (real or financial), but only give the investor a claim against the underlying interest if the issuer defaults, should be reported as types 5-11, as appropriate.

13. **Country of Residence of Foreign Holder** - Enter the country code from Appendix C that corresponds to the country of residence of the owner of the security. If the country of residence of the owner is not known, report the country of residence of the foreign-resident custodian or foreign-resident central securities depository. Positions of international and multinational regional organizations, whether located in the United States or elsewhere, should be reported opposite the classification “International,” if

worldwide, or opposite the classifications “European,” “Latin American,” “Caribbean,” “Asian,” “African,” or “Middle Eastern” regional organizations as indicated in Appendix D. If no country information is available (as will often be the case with bearer bonds), enter code 88862. If an excessive number of “country unknowns” is reported for securities other than bearer bonds, we will contact your institution for further information.

14. Currency of Denomination - Enter the ISO code from Appendix E that corresponds to the currency in which the security is denominated.

15. Type of Foreign Holder

- Enter “1” if the owner is an official institution (see Appendix C or D) **even** if the account is held in the name of a foreign custodian or other foreign nominee.
- Enter “2” for all other owners, including personal trusts and other investment vehicles even if the beneficial owner is an individual.

16. U.S. \$ Fair Value- Enter the U.S. \$ fair value of foreign-residents' ownership of this security, rounded to the nearest U.S. dollar. (See Section III.L, Valuation of Securities, for more information on how to calculate the fair value.)

17. Fair Value in Currency of Denomination - Enter the fair value of foreign-residents' ownership of this security, rounded to the nearest currency unit. For ABS, the fair value should be calculated based on the remaining principal outstanding (item 19) rather than the original face value. If the currency of issue is US\$, report the same value as in item 20. (See Section III.L, Valuation of Securities, for more information on how to calculate the fair value.)

FOR EQUITY SECURITIES ONLY

18. Number of Shares - Enter the number of shares owned by foreigners, including fractional shares, rounded to the nearest share. Wherever possible, combine partial shares with other ownership shares of the same security to reduce reporting disparities introduced by rounding partial shares. Securities for which the amount foreign owned is zero should not be reported.

FOR ALL DEBT SECURITIES (NON-ABS AND ABS)

19. Face Value or Remaining Principal in Currency of Denomination - Enter the face value held in the currency of denomination, rounded to the nearest whole currency unit. If a security is traded in units, then

calculate the face value as: (face value of each unit) * (the number of units held) and report the result in this field. Securities for which the amount held is zero should not be reported or Enter the remaining principal outstanding as of June 30, in the currency of denomination, rounded to the nearest whole currency unit. This will equal the original face value if no principal has been repaid. If a security is traded in units, then calculate the remaining face value as: (remaining face value of each unit) * (the number of units held) and report the result in this field. Securities for which the amount held is zero should not be reported.

FOR ASSET-BACKED SECURITIES ONLY

20. **Original Face Value in Currency of Denomination** - Enter the original face value owned by foreigners in the currency of denomination, rounded to the nearest whole currency unit. This is the value that is (would have been) outstanding if no principal has been (had been) repaid. If a security is traded in units, then calculate the original face value as: (original face value of each unit) * (the number of units) and report the result in this field.

FOR ALL DEBT SECURITIES (NON-ASSET BACKED AND ASSET-BACKED SECURITIES)

21. **Issue Date** - Enter the issue date of this security in MMDDYYYY format. For example, if the security was issued on October 4, 1985, enter 10041985. If there are multiple issue dates, enter the first such issue date.
22. **Maturity Date** - Enter the final maturity date (when all remaining principal and interest are due) of this security in MMDDYYYY format. For example, if the security's final maturity date is January 5, 2010, enter 01052010.

APPENDIX A
SAMPLE REPORTING FORM SHL/SHLA

This form is also available separately at the following Treasury website:

<https://home.treasury.gov/data/treasury-international-capital-tic-system-home-page/tic-forms-instructions/forms-shl>

**Report of Foreign Holdings of U.S. Securities, Including Selected Money Market Instruments
(SHL(A))**

**SCHEDULE 1: REPORTER CONTACT IDENTIFICATION AND
SUMMARY OF FINANCIAL INFORMATION**

1. Reporter Identification Number (RSSD):

--	--	--	--	--	--	--	--	--	--

2. Organization Name: _____

3. Street Address: _____

4. City: _____ 5. State: _____ 6. Zip Code: _____

7. Reporting Status: ☐

1 = Exempt - Under the exemption level

2 = Not Exempt - Schedule 2 records being submitted

8. Reporter Type: ☐

1 = Depository Institution

2 = Fund/Fund Manager/Sponsor
(excluding pension fund)

3 = Pension Fund

4 = Insurance Company

5 = Other Financial Organization
(including BHC, FHC, broker/dealers)

6 = Non-financial Organization

7 = Foundation, trust, estate

8 = Institution of higher learning
(e.g., university)

9 = Other (not listed above)

If you would like to provide more than one contact name, please attach additional copies of page 1, Schedule 1, with items 9 through 13 completed.

Business Contact Information:

9. Name: _____

10. Title: _____

11. Telephone Number: _____

12. Email Address: _____

13. Name of Service Provider or Vendor Used (if applicable): _____

Technical Contact Information:

14. Name: _____ 15. Title: _____

16. Telephone Number: _____ 17. Email Address: _____

Reporter Identification Number (RSSD):.....

--	--	--	--	--	--	--	--	--	--

18. Valuation Technique(s) Used to Determine Fair Values

For each reporting unit, please describe the valuation technique(s) used to determine reported fair values. If securities are automatically valued at zero after a specified time period of inactivity, please specify the time period and whether this applies to the security or to the client's holdings of the security. Also, please specify how securities not actively traded on the report date and those with internally generated security identification numbers are valued.

APPENDIX B - FLOWCHARTS SHOWING REPORTING RESPONSIBILITY

A. FLOWCHART FOR U.S.-RESIDENT CUSTODIANS (all securities, including all book-entry securities held at a U.S.-resident central securities depository)

1. A foreign-resident investor or custodian uses U.S.-resident custodian to hold U.S. securities for its account and the U.S.-resident custodian does not use a U.S.-resident sub-custodian.

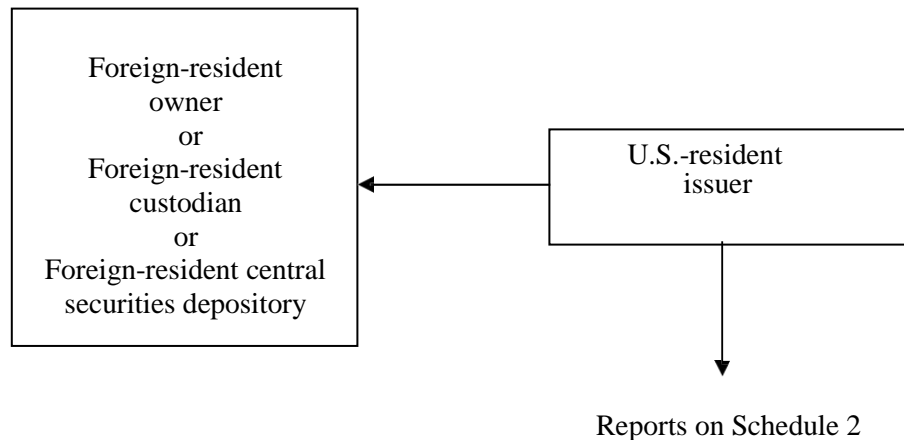

2. A foreign-resident investor or custodian uses U.S.-resident custodian to hold U.S. securities for its account and the U.S.-resident custodian uses a U.S.-resident sub-custodian.

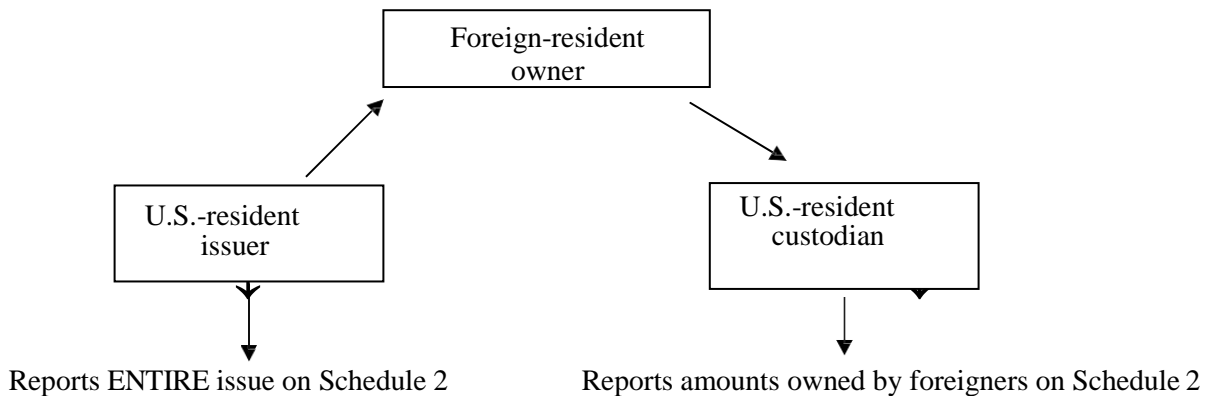

B. FLOWCHART FOR U.S.-RESIDENT ISSUERS (registered securities, including all book-entry securities not issued directly into a foreign market)

U.S. registered security is held directly by a foreigner (i.e., no U.S.-resident custodian and no U.S.-resident central securities depository is used).

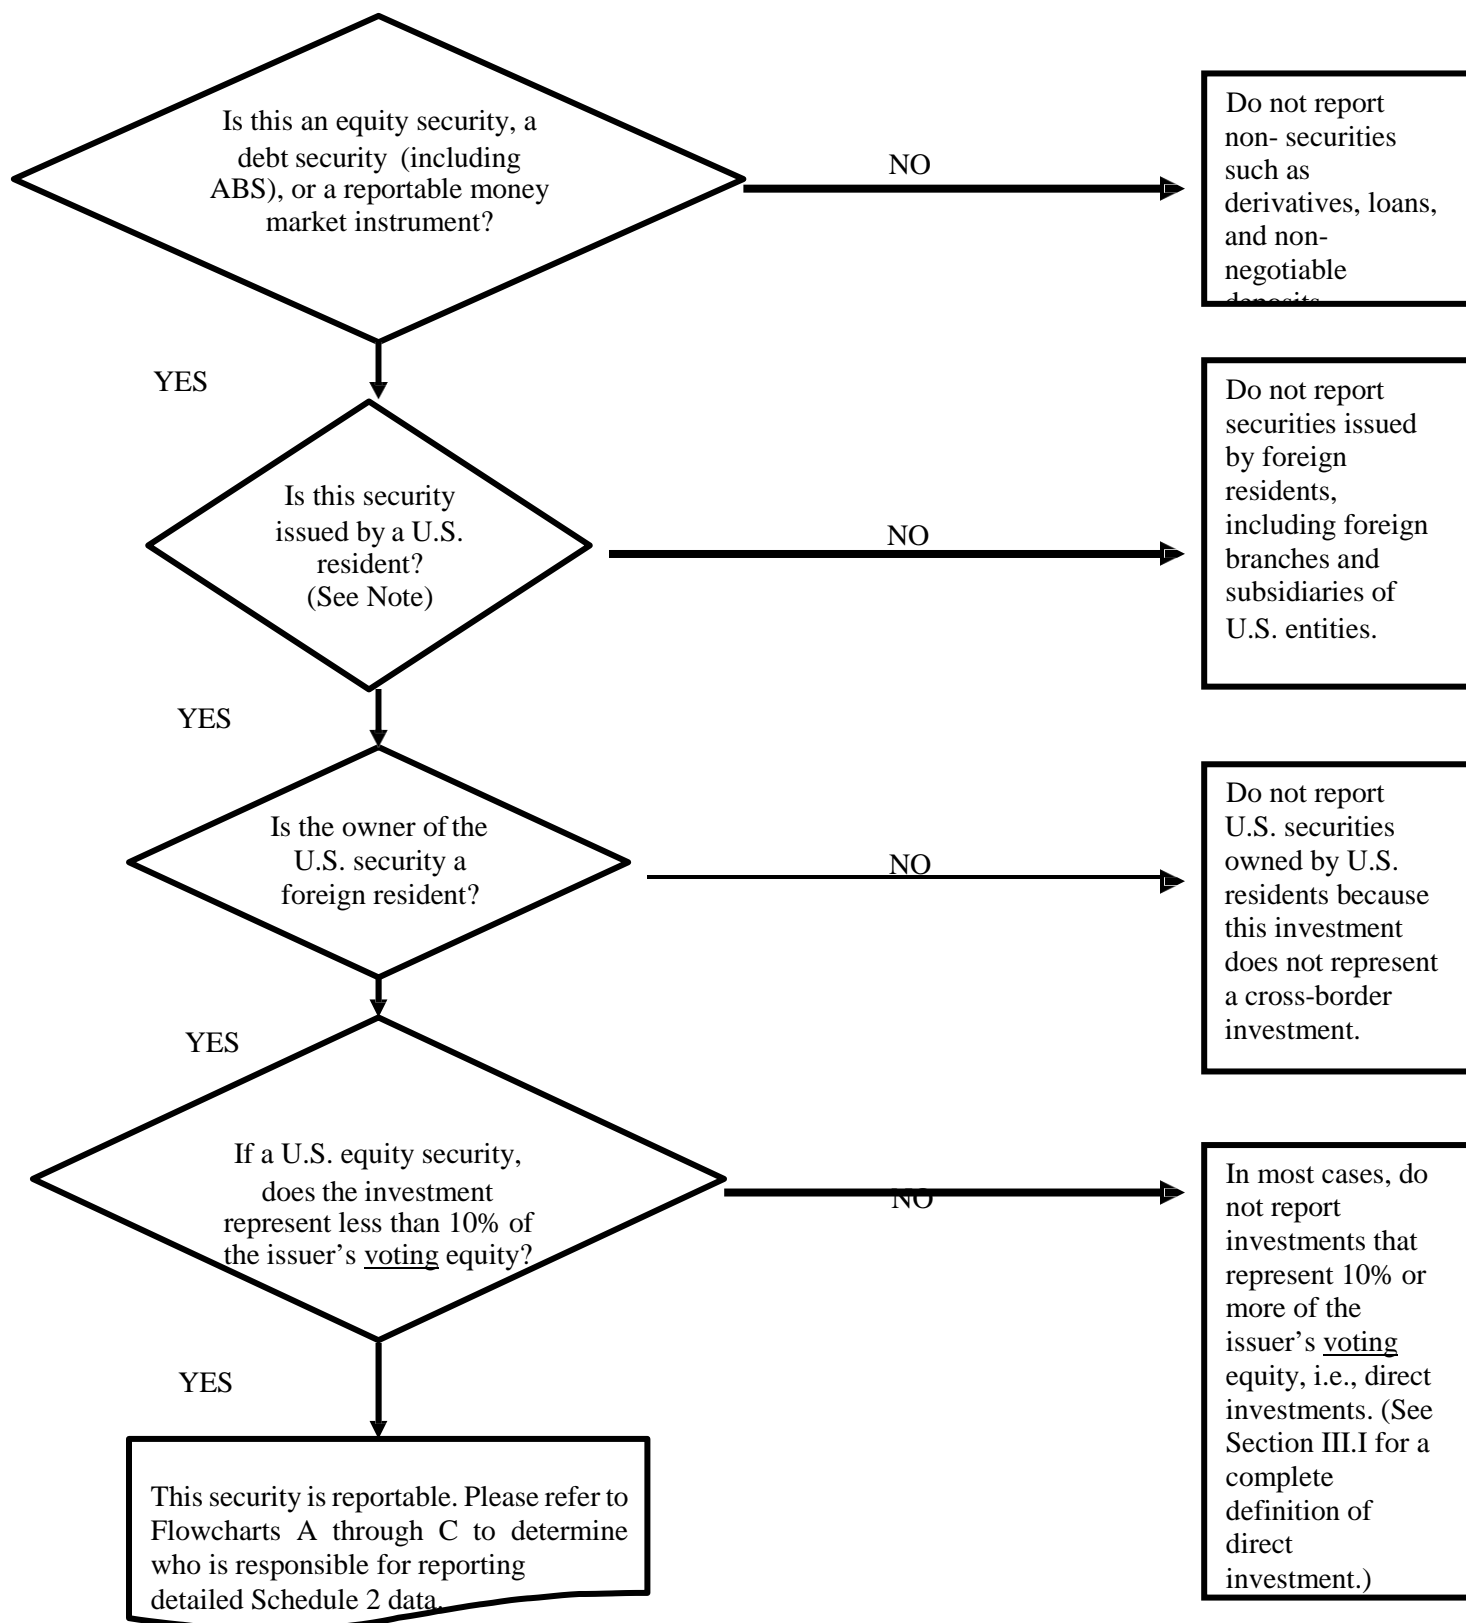

C. FLOWCHART FOR SECURITIES ISSUED DIRECTLY INTO THE FOREIGN MARKET

Issuers should assume that the entire issue is held directly by foreign residents. U.S.-resident custodians should report all securities held in custody that are foreign owned.

Note: FRBNY eliminates double reporting on a security-by-security basis. Custodial information is used to provide information on the geographical distribution of the owners of these securities.

FLOWCHART FOR DETERMINING REPORTABLE SECURITIES

Note: Depositary receipts/shares backed by foreign securities are considered “foreign.” In addition, all securities issued by the multinational organizations listed in Appendix D are considered foreign.

APPENDIX C
DEPARTMENT OF THE TREASURY

GEOGRAPHICAL CLASSIFICATION
CODES FOR COUNTRIES, AREAS & INTERNATIONAL/REGIONAL ORGANIZATIONS
TO BE USED FOR PURPOSES OF REPORTING ON
TREASURY INTERNATIONAL CAPITAL FORMS
