<sup>1</sup> Privately-held marketable borrowing excludes rollovers (auction “add-ons”) of Treasury securities held in the Federal Reserve’s System Open Market Account (SOMA) but includes financing required due to SOMA redemptions. Secondary market purchases of Treasury securities by SOMA do not directly change net privately-held marketable borrowing but, all else equal, when the securities mature and assuming the Fed does not redeem any maturing securities, would increase the amount of cash raised for a given privately-held auction size by increasing the SOMA “add-on” amount.

#### Discussion Topics

1. Please discuss your latest economic, fiscal and monetary policy, and Treasury financing forecasts for FY2020 and FY2021.
2. Please provide feedback on the actions taken by Treasury and the Federal Reserve System to address liquidity in Treasury securities, MBS, corporate bonds and commercial paper, and municipal bonds. How do you expect purchases of Treasury securities by the Federal Reserve System to evolve going forward?

---

<sup>2</sup> Privately-held bills exclude SOMA holdings. As such, the difference between “Total change in bills outstanding” and “Change in *privately-held* bills outstanding” should reflect SOMA secondary market purchases/sales (or redemption of maturing securities).

**Part 2:**

Given your expectations for borrowing needs over the next three fiscal years (as presented in question 1), Treasury would like your expectations for:

1. Auction sizes (\$bn) in all tenors by the end of FY20, FY21, and FY22, and
2. Auction size ranges (\$bn) that would not surprise you across all tenors by the end of FY20, FY21, and FY22.

Auction size estimates should take into account the amount net of SOMA add-ons of Treasury securities.
